DANIELS
PLANTING GUIDE
1950

Compliments of

The Daniels Nursery

Long Lake, Minnesota

MEET THE "FAMILY"

Most folks like to know what the people they do business with are like and look like.

So—here's the Daniels "Top-Brass"—the bunch of Horticultural enthusiasts that make us "tick."

We will all be glad to meet you any time when you drive out to the Nursery, and to give you all the helpful service that we can.

FRANC P. DANIELS, Sr., B.S.A.
Proprietor

The Daniels Nursery is owned and operated by Franc P. Daniels. These facts about him will explain in part the widespread customer confidence in our nursery: 41 years of Horticultural work; 37 years operating The Daniels Nursery at Long Lake; 23 years part time lecturer on Horticultural subjects at the Minnesota School of Agriculture; 2 years President Minnesota State Horticultural Society; 3 years President Hennepin County Agricultural Society; 14 years President Minnetonka Fruit Growers Association; 37 years an extensive fruit and vegetable grower; author of the Northwest's leading book on Horticulture and Gardening for the Northwest.

Mr. Daniels' long and practical experience makes it possible for us to offer you the very best in nursery stock, and landscape materials and services.

His counsel and advice on any of your horticultural problems are free for the asking—and bring to you the knowledge and understanding gained through forty years of technical and practical horticultural experience. You are as near to him as the telephone, the mailman or the travels of your car. **Telephone Long Lake 174.**

JOSEPH W. BAKER
Office Manager and
General "Right Hand"

"Joe" is the quiet, helpful fellow you meet at the office. You'll find no one more capable or willing in helping you select your varieties of nursery stock whether in the office, in the perennial field or in our Garden Shop.

Besides taking care of you folks when you visit us and keeping the complicated book work of our organization running smoothly, Joe finds time to answer many of your inquiries that come in by letter and phone.

Has a farm background and is author of several published short stories.

MANSFIELD A. WATTS, B.S.A.
Landscape Department
and Sales

For the past two years "Manny" has played an important part in our landscape operations. Many of you will recognize him as the quiet spoken fellow who has been so helpful to you in solving your landscape problems.

"Manny" came to us with a wide and excellent nursery and landscape background. After graduating in Horticulture at the University of Minnesota he spent several years in Landscape work in the east. With the advent of World War II he joined the services and after three years of service in Europe returned to Minnesota, joining our organization in 1947.

EDWIN H. CRONK
Production and
Packing Manager

"Eddie" is the genial, smiling "young fellow" those of you who call at our storage cellar know so well. Besides having charge of our storage cellar and the packing department, Eddie is in overall charge of our production. With us, production is quite a job, entailing all the steps in propagating and growing the vast quantities of nursery stock, fruits and vegetables we raise on our 125 acres devoted to Horticultural crops. Before joining our organization Eddie worked as a Professional Gardener.

FRANC P. DANIELS, Jr.
Our 2nd Generation
"At Your Service"

Franc Jr. has a well rounded background in practical horticulture, for he has literally "grown up" in the nursery business. During the many years that he has worked in the nursery he has had practical experience in every branch of our production and service work.

Although he is spending part of each year rounding out his technical horticultural training at the University of Minnesota, he manages to arrange his college work so that he is with us throughout our busiest seasons. You will find him most capable in helping you to select your plants.

"Jerry" is the latest addition to our staff of landscape experts, having joined our organization in 1949. You will find that he and his abilities are in keeping with our high standards. He has much to offer our customers.

After serving 27 months in the Naval Air Corps he enrolled at the University of Illinois. Upon graduation with a degree in Landscape Architecture, "Jerry" worked as a free-lance Landscape Architect before joining us. You'll like his enthusiastic cooperation when you undertake to "dress up your yard."

R. G. LUESSE, B.A.
Landscape Department
and Sales

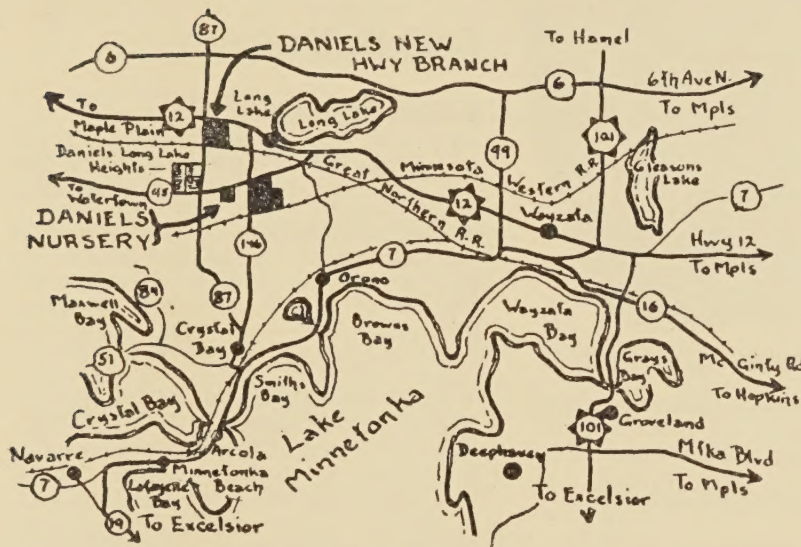

Our 37th Year at Long Lake

Thirty-seven years is a long time in anybody's life, and an even longer time in a business life.

We could tell you much about our extensive acreages, our skilled plantsmen and landscape experts, and our unexcelled facilities for producing and handling top quality nursery stock.

But more convincing yet, is the fact that during the many years we have been here at Long Lake, our business volume and our customer confidence have continually grown until now we enjoy the distinction of being Hennepin County's largest nursery and an outstanding leader in the field of nursery and landscape work and service.

You can buy from Daniels with complete confidence that you will get nothing but the best in materials and service.

WE THINK WE'RE DIFFERENT!

We like to feel that we are "different"—at least we've tried to be. We grow only those varieties of plants which we feel will give a full measure of satisfaction to our customers. We endeavor to grow, in so far as we can, all of the nursery stock that we sell. We pride ourselves on the fine stock we produce and are pleased and proud to show it to our customers.

In the field of landscape planting and services we have at all times maintained a high standard of professional work—resulting in developments that have given lasting satisfaction to our clients.

It is our endeavor to have our sales effort just the kind we'd like to have directed towards ourselves—a helpful and accurate presentation of facts and advantages entirely free from "high-pressure"—misrepresentation or other unpleasant or unethical approach. You will like to do business with us and you will want to "come again."

So we think we're different! If you've had experience with certain other nurseries, or "so-called" nurseries, and some of the "foot in the door type" of nursery stock salesmen, you'll really enjoy getting acquainted with us. We've spent many, many years developing our present high standing in the business.

We can be truly helpful to you!

Visitors Are Always Welcome at Daniels

We are only twenty-five minutes from Minneapolis. Follow Wayzata Boulevard (Highway No. 12) to Long Lake. Our main office and storage cellars are situated just south of the Long Lake Village limits on County Highway No. 45—but we also maintain a branch office on one of our nurseries just ¼ mile west of Long Lake on State Highway No. 12. At both places you'll find acres and acres of the finest nursery stock in the Northwest . . . trees, shrubs, evergreens, perennials, and fruit plants . . . everything for planting the home grounds.

Come, browse all you wish, and we're sure you'll enjoy your visit. We think that you will truly marvel at the tremendous acreage and the high quality of our plants.

And if you want to buy, fine! We'll do our best to serve you to your complete satisfaction.

But come anyhow—you'll always be welcome.

DANNY SAYS:

Why not crank up the "ol' bus" and drive over to see us? It's not so far . . . and you'll enjoy both the ride and the visit.

Given below are 15 important "Planting Dos." Please read them carefully and then do them.

DANNY'S PLANTING INSURANCE POLICY

15 PLANTING "DOS" For Dormant, Bare Root Stock

- 1—Keep plants moist at all times.
- 2—Protect roots from air, sun and wind. Don't let them dry out even momentarily.
- 3—Dig holes larger than the root spread.
- 4—Use good rich soil around roots.
- 5—If fertilizer is used, keep it away from the roots, use only moderate amounts.
- 6—Set slightly deeper than the plant stood in the nursery row.
- 7—Spread the roots well.
- 8—Work soil carefully around and between the roots and firm well.
- 9—Leave a slight depression for a water basin.
- 10—Water thoroughly, "SOAK 'EM!"
- 11—Water again the next day.
- 12—Water once a week (unless nature provides) until well established (or in fall, until the ground freezes).
- 13—PRUNE! Better to cut off too much than too little. In general, thin and head back so that from 1/3 to 1/2 of the buds are removed.
- 14—Leave soil loose and cultivated on top.
- 15—Keep up cultivation of top soil. No farmer can grow good corn or potatoes unless he gives them good culture. The same is true of our plants.

Informality and
Formality Combined
In a Charming
Outdoor Retreat

It Has Been Truly Said—

"It's Not a Home 'Till It's Planted"

With most people, that is an accepted fact. True, also, is it that no spaciouly placed public office or commercial building is a "finished" edifice until it, too, has been well landscaped.

The Daniels Nursery offers you truly dependable nursery stock and design and planting service.

OUR LANDSCAPE SERVICES FOR 1950

Through careful, conscientious, economical performance we have long enjoyed an enviable reputation for the furnishing of the following landscape services and materials:

Landscape Design and Plans	Tree Spraying
Planting of Nursery Stock	Orchard Spraying
Shrub Trimming	Grading and Sodding
Tree Trimming and Care	Lawn Building and Renovation
Tree Removal	Stone Walls and Walks
Tree Feeding	Soil, Peat and Fertilizers

It will be a pleasure to have one of our landscape experts consult with you, without charge, regarding your planting or other landscape problems. You will find their advice sound and truly helpful. We are here to serve you conscientiously and without high pressure sales effort. May we help you?

As usual we can serve those best who plan with us early—the earlier the better, before the spring rush.

DANIELS COMPLETE LANDSCAPE SERVICE

Consult Daniels . . .

● **FOR DISTINCTION**—Superior design and judicious foresight in the use of materials that will bring just the right "touch" to your plantings.

● **FOR QUALITY**—In plants and in workmanship. No better plants are grown anywhere. Skilled plantsmen handle all of our stock and no pains are spared to turn out uniformly good specimens.

● **FOR DEPENDABILITY**—The result of many factors, **DEPENDABILITY**, is of the utmost importance to be buyer of nursery stock. To be truly dependable, stock must be true to name, well grown with good roots and tops, and so dug, handled, stored and packed that it reaches the planter in perfect growing condition. **DANIELS STOCK IS DEPENDABLE.**

LOMBARDY POPLAR

DANIELS HARDY ORNAMENTAL SHRUBS

Shrubbery is an invaluable asset to the beauty of the home grounds. Use it as a "paint brush" to obtain the quick and charming effect in the outdoor living room, foundation planting or shrub border. You will find a great variety of shrubs here, each with its special merits, whether it be beauty of flowers, foliage, fruit, bark colorings or a combination of all. Drive out and see for yourself that our shrubs are heavy stock and not to be thought of in the same terms as the ordinary mail-order plant. We have taken care to list only those suited to our climate here in the Northwest.

Only the 12-18 in., 18-24 in., and 2-3 ft. sizes are available. Add 10% if to go by mail.

ALMOND (Pink Flowering)—4 to 5 ft. Twigs completely covered with roselike, pink flowers in early spring. One of the most charming of early flowering shrubs and unsurpassed in beauty in its season. 2-3 ft. \$1.50; 3-4 ft. \$1.75.

ARROWWOOD—8 to 10 ft. An attractive shrub with rich green foliage turning to rich purple and red in the fall. Greenish white flowers followed by blue berries. Does well in moist soil. One of the best for mass plantings. 2-3 ft. \$1.00; 3-4 ft. \$1.50.

BARBERRY (Japanese, Thunbergi)—Low, compact growing shrub much used for border or hedge plant or for group plantings. Stands shearing well. Foliage turns a bright crimson in autumn and bright scarlet berries add color all winter. 12-18 in. 60c; 18-24 in. 75c; 2-3 ft. \$1.00.

BARBERRY (Red Leaved)—2 feet. First foliage a warm bronzy red; the heat of the summer intensifying its red brilliancy; autumn adding other tints to its richness. Abundant scarlet berries persist through winter along the spiny twigs. A sunny exposure is necessary to bring out and retain its full red color. 12-18 in. \$1.00; 18-24 in. \$1.25.

BUCKTHORN (Common)—12 feet. Hardy vigorous shrub with lustrous leaves and black berries. Desirable for groups and for hedges. Stands shearing well. 2-3 ft. 50c; 3-4 ft. 75c; 4-5 ft. \$1.00.

BUCKTHORN (Frangulea)—6-7 ft. Finer leaves than the Common Buckthorn. Glossy deep green. Produces red berries in the fall. An excellent border shrub. Does well in low places. 2-3 ft. 75c; 3-4 ft. \$1.00; 4-5 ft. \$1.25.

BUFFALO BERRY (Shepherdia Argentia)—A tall silvery foliaged shrub, valuable for contrast in a mixed shrub planting and useful as a hedge plant. Flowers yellowish and fruit a bright red—valued for jellies and conserves. A native of

the Northwest Plains states, it is noted for its ability to withstand extreme cold and dry conditions. 3-4 ft. \$1.25.

BUDDLEIA (Butterfly Bush)—5-6 ft. Very attractive shrub with reddish-violet flowers and long gray-green leaves. Blooms all the latter part of the summer. Splendid as a cut flower. Lower part of stem should be covered with dirt each fall. 2 yr. No. 1 \$1.00.

CARAGANA (Siberian Pea Tree)—10-12 ft. Extremely hardy. Strong thrifty grower. Branches numerous and artistic in growth. Blossoms are pealike and of a lovely canary yellow color, coming forth in small clusters in late spring. 2-3 ft. 60c; 3-4 ft. 85c.

CARAGANA (Pygmaea)—1½-2 ft. A very dwarf type of Siberian Pea Tree with large yellow flowers in June. Neat and regular habit. Fine for low hedges. 18-24 in., 75c; 2-3 ft. \$1.00.

CHERRY, CISTENA (Purple Leaf Cherry)—5 to 6 ft. The finest of our medium sized shrubs of strong reddish or purple color throughout the growing season. In early spring it is covered with masses of white plumlike blossoms, backgrounded by newly unfolding purple to crimson leaves. Its striking color persists throughout the entire growing season. 2-3 ft. \$1.75; 3-4 ft. \$2.25; 4-5 ft. \$3.00.

CHERRY (Hanson's Improved Bush Cherry)—An improved bush cherry developed at the South Dakota station. A beautiful small shrub—compact bush, attractive foliage, gorgeous in bloom, and loads heavily with masses of beautiful little cherries early in the fruiting season. Fruit is one of best for jelly. Plant more than one for correct pollination. A useful, effective hedge of great beauty. 18-24 in. 65c; 2-3 ft. 85c; 3-4 ft. \$1.00.

It's A Home When It's Planted!

An effective and attractive border of shrubs—screening the porch and outdoor living room from the driveway and highway — delightfully achieving the desired privacy.

CHERRY, KOREAN (Prunus Japonica)—Dwarf 3 to 4 ft. plants are a mass of gorgeous blooms in spring, followed by loads of delicious full-sized bright red cherries—sweeter than commercial pie cherries. Makes appetizing pies, tasty sauce and preserves. Very hardy—often bear second year. Plant two or more to insure pollination. 3-4 ft. \$2.00.

CHERRY, NANKING (Prunus Tomentosum)—8-10 feet. A spreading shrub with white or tinted flowers appearing before the leaves in early spring. This is of real value in the border. The fruit is of good size, cherry type, and edible. 2-3 ft. \$1.35; 3-4 ft. \$1.75; 4-5 ft. \$2.25.

CHERRY (Nanking New Minnesota Numbers 20 and 41)—Two improved Minnesota creations. Two outstanding ornamental and heavy producers of brilliant, useful fruit. The beautifully formed shrubs reach a height of about 7 feet and present an unusual combination of beautiful flowers (extra early), attractive foliage, with generous loads of brilliant, red cherries in early summer. The fruit is excellent for eating out of hand, or for jelly and canning. We offer two of the best of the new improved Nanking Cherries developed by our University Experts, Minnesota Nos. 20 and 41. 3-4 ft. \$2.00.

CORALBERRY (Red Snowberry)—3-4 ft. A slender branching upright shrub, valuable for planting in shady places. Red to purple berries in late summer and fall. Entirely hardy and grows where other plants fail. 18-24 in. 50c; 2-3 ft. 75c; 3-4 ft. \$1.00.

COTONEASTER (Acutifolia)—6 ft. A handsome shrub, well meriting its popularity. Dense growing with ornamental, dark, glossy green leaves. Very desirable for foundation plantings. Small pink blossoms in early spring followed by black berries throughout fall and winter. 2-3 ft. \$1.25; 3-4 ft. \$1.75.

COTONEASTER (Integerrima)—5-6 ft. Is of bushy, rounded form with short stiff branches and red berries. Has a strikingly horizontal manner of growth. Hardy north into Canada. A distinctly different shrub of real value. 2-3 ft. \$1.25; 3-4 ft. \$1.75.

CRANBERRY (High Bush)—8-10 ft. Very hardy Viburnum. White flowers in June. During fall and winter the bush is literally loaded with bright red fruit, resembling the cranberry in color, size and flavor. Useful for jelly. 2-3 ft. \$1.00; 3-4 ft. \$1.50; 4-5 ft. \$2.00.

CURRANT (Alpine)—3-4 ft. Dwarf shrub. Dense growth. Fine, dark green leaves. One of the best low to medium height shrubs for planting under most all conditions. 12-18 in. 75c; 18-24 inch \$1.10.

YELLOW FLOWERING CURRANT—6 to 7 ft. A graceful shrub which endures shade well. Early in spring it bears profusely small, bright yellow flowers of intriguing clove-like fragrance. These are followed by currant like fruit which is most appetizing to the birds. Suckers freely. 3-4 ft. \$1.25.

DOGWOOD (Golden)—6 ft. A very pleasing shrub similar in manner of growth to the Red Twig Dogwood, but especially valuable for its bright yellow bark which makes a pleasing contrast with the Red Twig or other shrubs in the winter. 3-4 ft. \$1.25.

DOGWOOD, BAILYI (Red Twigged)—6-7 ft. Good for border groupings, where the smooth, slender, bright red branches in winter make a very pleasing contrast with evergreens and snow. Small white blossoms early in summer, succeeded by a fall crop of ornamental berries. Good foliage. 2-3 ft. 75c; 3-4 ft. \$1.00; 4-5 ft. \$1.25.

DOGWOOD (Variegated-Leaved)—5-6 ft. Highly decorative because of its white striped green leaves and red bark. Its white flowers in spring are also interesting. An outstanding shrub wherever used. 2-3 ft. \$1.75; 3-4 ft. \$2.00.

ELDER (Black-berried)—6 ft. Heavy, broad clusters of white blossoms in July, followed by edible black fruit. A very rapid growing shrub. 2-3 ft. 75c; 3-4 ft. \$1.00; 4-5 ft. \$1.25.

ELDER (Cut Leaved)—6 to 8 ft. The most graceful of the elders. The large handsome, delicate white flowers of early summer are followed by big clusters of blue-black berries. Probably its chief landscape value comes from the deeply cut, fern like leaves and somewhat drooping habit which gives a delightfully soft and feathery touch to the landscape planting. 2-3 ft. 75c; 3-4 ft. \$1.00; 4-5 ft. \$1.25.

ELDER (Golden-Leaf)—6-7 ft. The gorgeous, golden beauty of this splendid hardy shrub makes a wonderful background. The bushy, vigorous growth makes an effective screen. Its golden beauty responds

Avoid straight rows, place shrubs in irregular or zig-zag arrangement; small shrubs close together, large shrubs farther apart.

to a sunny place. Thrives in moist places. 2-3 ft. 75c; 3-4 ft. \$1.00; 4-5 ft. \$1.25.

EUONYMUS (Common Burning Bush)—6-7 ft. Tall, erect shrub for border or group planting. Produces great masses of orange-scarlet berries. Very effective for fall color. 2-3 ft. \$1.00; 3-4 ft. \$1.50.

FORSYTHIA (Golden Bell)—An attractive shrub with wealth of brilliant yellow flowers appearing before the leaves. Does well in partial shade as well as in the open. Should have some winter protection in exposed places. 2-3 ft. 85c; 3-4 ft. \$1.10.

HOLLY (Ilex Verticillata; Winter-berry)—6-8 ft. The best of the hardy holly varieties. A compact, slow growing shrub. High quality, glossy bright green foliage. Brilliant red holly berries in fall, persisting on into winter. 2-3 ft. \$1.25; 3-4 ft. \$1.75.

HONEYSUCKLE (Morrows)—5-6 ft. A distinctive type. Semi-spreading drooping branches. White flowers in June followed by brilliant red fruits in August. Foliage grayish-green hue, pubescent. A charming color variation in the border planting. 2-3 ft. 75c; 3-4 ft. \$1.10; 4-5 ft. \$1.35.

HONEYSUCKLE (Tartarian, White and Pink)—8-10 ft. Strong, upright growing shrub which thrives under all conditions. Produces an abundance of Pink flowers in May followed by masses of red fruit in autumn. 2-3 ft. 75c; 3-4 ft. \$1.10; 4-5 ft. \$1.35.

HYDRANGEA (Hills of Snow)—3-4 ft. Blooms from June until frost. The flowers are large, snow white, and produced in abundance. Valuable also because it comes when blooms are scarce, just after the abundance of blossoms in spring. A fine shrub for shady locations. 12-18 in. 75c; 18-24 in. \$1.00; 2-3 ft. \$1.50.

HYDRANGEA (Pee Gee)—3-4 ft. A beautiful shrub with leaves of bright, glossy green; flowers borne in huge panicles from 8 to 12 inches long, light pink, changing to brown later in the fall. Blooms in August and September. The blooms are very lasting and may be cut and taken into the house without losing either color or size. 12-18 in. 75c; 18-24 in. \$1.00; 2-3 ft. \$1.50.

JUNEBERRY—6 to 7 ft. One of the earliest plants to bloom in the spring. Because of its blooming season, it makes a most attractive plant to use in conjunction with Double Flowering Plum. Early in the summer the edible blueberry-like berries turn red and then deep blue. A most attractive and useful shrub. 2-3 ft. \$1.25.

LILAC (Common Purple)—6 to 8 ft. The well-known, old fashioned purple lilac. Your home landscape needs its exquisite purple colorings and sweet fragrance. 18-24 in. 60c; 2-3 ft. \$1.10; 3-4 ft. \$1.35.

LILAC (Common White)—6 to 8 ft. Similar in habit or growth to the Purple Lilac but produces fine, lacy-like blooms, fragrant. 18-24 in. 60c; 2-3 ft. \$1.10; 3-4 ft. \$1.35.

LILAC (Persian) 6-7 feet. Slender growth, fine leaves and many branchings. Does not sucker like the common varieties. Pale purple flowers in large panicles early in the season. 2-3 ft. \$1.25; 3-4 ft. \$1.50.

LILAC (Rouen or Rothomagensis)—5-6 ft. A late, profuse blooming, reddish purple lilac. Delicate formed leaves. Very attractive shrub. 2-3 ft. \$1.25; 3-4 ft. \$1.50.

LILAC (Villosa)—10 ft. Late flowering, bushy, upright growth. Rich dark foliage, pinkish lilac flowers. A desirable hardy shrub, ornamental both in and out of flower. 2-3 ft. \$1.25; 3-4 ft. \$1.50.

FRENCH LILACS—6-8 ft. The bush is a little smaller than the common lilac, but there is no comparison in the flowers. The flower stalks of the hybrids are many times as large as the common lilac. It is not uncommon to see flower spikes 15 inches long. The French lilacs are particularly desirable for garden planting where their beautiful trusses contrast splendidly with spring flowers planted beneath. All the varieties listed below are hardy, free flowering sorts, which will prove highly satisfactory. 18-24 in. \$1.35; 2-3 ft. \$1.85; 3-4 ft. \$2.50.

MAPLE (Ginnala)—6-8 ft. A dwarf shrubby tree with handsome, finely cut leaves. Attractive clusters of winged seed pods. Leaves turn to a brilliant shade of crimson in the fall. 2-3 ft. \$1.00; 3-4 ft. \$1.35.

MATRIMONY VINE—Used both as a low shrub and vine. Very successful as a ground cover and soil retainer on steep slopes and embankments. Throughout summer it produces large numbers of purple flowers, succeeded by bright scarlet berries. Fruit remains on vine late into winter. 2 yr. 60c; 3 yr. 85c.

MOCK ORANGE (Coronarius)—5-6 ft. Sweet scented. A hardy, vigorous growing shrub valuable for many locations and loved because of its pure white, sweetly scented flowers which are borne in profusion in June. 2-3 ft. \$1.10; 3-4 ft. \$1.35.

MOCK ORANGE (Grandiflora)—8-10 ft. Large flowering. Fairly covered with large, creamy white flowers in early summer. Unrivalled for screening or background in a heavy planting. 2-3 ft. \$1.10; 3-4 ft. \$1.35.

MOCK ORANGE (Lemoine)—4-5 ft. A showy and free blooming variety with slender arching branches. Flowers creamy white and very fragrant. 2-3 ft. \$1.10; 3-4 ft. \$1.35.

MOCK ORANGE (Snowflake) (U.S. Plant Pat. No. 538)—This is the biggest improvement in Mock Oranges in many years. This new Double Mock Orange is truly outstanding. It is all double; every blossom intensely double. Exceptionally sweet scented, glistening white, large flowering, profuse bloomer, symmetrically formed and gracefully branched, neat, beautiful foliage, rugged, fast growing, and exceptionally hardy. It will grow to a height of 10 to 12 feet as a large specimen shrub, or if desired can be easily kept within bounds with a little pruning. A truly remarkable shrub. Plant Patent prohibits propagation of Snowflake by anyone except Patent owners and those licensed by them. **Better order early!** 2-3 ft. \$1.50; 3-4 ft. \$2.00

MOCK ORANGE (Virginal)—6-7 ft. A magnificent New Mock Orange.

It has large petals, double crested white flowers, five to seven in a cluster, sweet scented and a long blooming season. This shrub should be in every planting. 2-3 ft. \$1.25; 3-4 ft. \$1.75.

OLIVE (Russian)—10-12 ft. While this plant really is a smaller tree, yet when it is kept pruned rather severely, it forms a most attractive shrub. Its foliage is of a remarkable silvery-hue, showing up in striking contrast to the green of other shrubs and trees. Has fragrant yellow flowers, followed by yellowish-green fruits. Very hardy. 2-3 ft. 75c; 3-4 ft. \$1.00; 4-5 ft. \$1.25; 5-6 ft. \$1.75.

PLUM (Double Flowering or Rose Tree of China)—6-7 ft. A choice medium sized shrub with flowers resembling those of the Flowering Almond. The delicate, very double rose-like flowers are borne in profusion just as the leaves are starting to unfold. Very hardy. 18-24 in. \$1.25; 2-3 ft. \$1.75; 3-4 ft. \$2.25.

PLUM (Newport)—10-12 ft. The best red-leaved small tree for the north. Origination of the Minnesota Fruit Breeding Farm. Its reddish-purple leaves and slow growth make its use very desirable where color effect and refinement are wanted amongst the other shrubs. 3-4 ft. \$2.25; 4-5 ft. \$3.00; 5-6 ft. \$3.50.

POTENTILLA FRUITICOSA (Cinquefoil)—2 to 3 ft. A graceful compact shrub with dense fernlike foliage. Studded with golden yellow, buttercup-like flowers from early June to October. A splendid low-growing shrub for foreground planting. Spaced a foot apart in a single

DANIELS SELECT FRENCH LILACS

BELLE de NANCY—Double. Rose pink.

CHAS. JOLLY—Double. Purplish red.

CONGO—Single. Dark wine red.

MME. CASEMIR PERRIER—Double. White.

PRES. GREVY—Double. Clear, violet blue.

BALLED and BURLAPED FRENCH LILACS

For those who want to buy these Lilacs in full bloom we ball and burlap a quantity of them each year. During their flowering season they may be selected at the nursery—in full bloom—and moved with no check in growth or loss of flowers.

MOCK ORANGE VIRGINAL

row it makes a most charming hedge. Does best in full sun. 15-18 in. \$1.00; 18-24 in. \$1.25.

ROSE ACACIA (Robinia Hispida)—6-7 ft. A shrub with open graceful foliage and handsome showy rose-colored flowers in pendulous racemes. Does best on south sunny slopes and is not particular as to soil. Growing well even in dry sandy soils. 18-24 in. \$1.00.

SNOWBERRY (Waxberry)—3-4 ft. A rather low growing shrub with small pink flowers followed by large clusters of white berries which hang on until winter. Has an attractive bright foliage throughout the season. 18-24 in. 50c; 2-3 ft. 75c; 3-4 ft. \$1.00.

DOUBLE FRENCH LILACS

SNOWBERRY

SPIREA ANTHONY WATERER—2-3 ft. A very popular low growing bush, constantly in bloom all summer. Flower clusters large, flat topped and of deep rose color. The leaves are frequently variegated yellow and red. 12-18 in. 75c; 18-24 in. \$1.00.

SPIREA ARGUTA (Snow Garland)—4-5 ft. A Japanese variety of stiff irregular growth with white flowers which completely cover the twigs before the leaves appear in the spring. Attractive light, feathery foliage. One of the first shrubs to bloom in the spring. Splendid in a foundation planting. 2-3 ft. \$1.00; 3-4 ft. \$1.50.

SPIREA—Ash Leaved Sorbifolia—4-5 ft. Of a vigorous species with leaves similar to Mt. Ash and long elegant spikes of white flowers. Stands either full sun or partial shade. 2-3 ft. 85c; 3-4 ft. \$1.25.

SPIREA BILLARDI—4-5 ft. Sometimes known as the Pink Summer Spirea. Tall, erect shrub with canes terminated by feathery plumes, 5 to 8 inches long, of dainty pink color. Blooms when other shrubs are out of flower. 2-3 ft. 85c; 3-4 ft. \$1.25.

SPIREA BRIDAL WREATH (Van Houttei)—5-6 ft. This is the most popular of all the spireas, and is more largely planted than any other one shrub. Its graceful arching branches heaped as they are with the white blossoms in spring and its thriftiness under the most trying conditions are the reason for its popularity. 2-3 ft. 70c; 3-4 ft. \$1.00.

SPIREA FROEBELI—2-3 ft. A low, bushy shrub of the Anthony Waterer type, but more sturdy in habit. Canes distinctly reddish; young foliage tinged red. Flowers rose color. Brilliantly colored in autumn. 12-18 in. 50c; 18-24 in. 75c; 2-3 ft. \$1.00.

SPIREA OPULIFOLIA (Ninebark)—6-7 ft. The largest growing species of this group. Valuable for massing and also for background for other shrubs. Many small clusters of white flowers followed by red seed pods. 2-3 ft. 85c; 3-4 ft. \$1.10; 4-5 ft. \$1.50.

SPIREA OPULIFOLIA AUREA (Golden Spirea)—6 ft. A full branched bushy golden leaved shrub. Upright, hardy, and splendid for giving a delightful touch of golden color in the shrub border. Numerous clusters of white flowers are followed by reddish seed pods which give the effect of red berries, making a pleasing contrast with the golden tinged foliage. 2-3 ft. \$1.00; 3-4 ft. \$1.25; 4-5 ft. \$1.50.

SPIREA OPULIFOLIA NANA—(Dwarf Ninebark)—4-5 ft. A valuable rather new hardy low growing shrub. Dwarf and compact in form, dense in growth. White flowers followed by small red seed pods in June. Valuable addition to our small shrubs. 2-3 ft. \$1.00; 3-4 ft. \$1.25.

TAMARIX (Salt Cedar)—6-7 ft. Will grow on any soil and under any conditions. Has feathery, silvery-gray green foliage, with long panicles of deep pink flowers. A distinctive type of shrub. 3-4 ft. \$1.35; 4-5 ft. \$1.50; 5-6 ft. \$2.00.

WAYFARING TREE—8-10 ft. One of the most desirable of our shrubs. The leaves are thick, deep green above and lighter below and very pubescent, giving them a striking, soft and silvery appearance. Upright in growth. Flat clusters of creamy white flowers in May or June are followed in midsummer by clusters of bright red berries changing to black. One of the choicest shrubs. 2-3 ft. \$1.25; 3-4 ft. \$1.50.

WEIGELIA ROSEA—6 ft. Of spreading habit, with more or less pendulous branches and clusters of bell-shaped flowers. Showy in spring and early summer. Thrives in moist soil. Needs winter protection if planted in exposed places. 3-4 ft. \$1.25.

SPIREA ANTHONY WATERER

PLANT NOW PAY LATER

It is possible to plant now and pay later on the Budget Plan thru an improvement loan. Immediate effect and growing beauty while you pay. Ask us or your banker.

DANNY SAYS:

When it comes to hedging, hedge—don't hedge. Proper hedging gives a fence and your neighbors no offense. If you must draw the line somewhere, draw it with a hedge. They beautify as they serve.

Daniels HEDGING SHRUBS

Living, Lasting Fences

The proper use of hedges adds immeasurably to the attractiveness of one's home grounds. They will effectively mark a boundary line, serve as a screen, or furnish a pleasing background for an informal planting.

In this group we offer fine, strong plants, suitable for starting live fences. These are well grown, strong rooted hedging size specimens which will give quick results.

PRUNING HEDGES

The newly planted hedge should be pruned heavily and at a uniform height. When the plant is cut back, all new shoots will develop from the remaining "stubs." The closer to the ground that the cut is made, the closer to the ground the new branches will be; and as these branches establish the permanent framework of the hedge, the fuller and denser the future hedge will become at the base.

Subsequent trimming consists of pruning back, several times each season, for the first two or three years until the hedge reaches the desired height. This treatment forces continuous low side branching as the plants gain height, and insures a full compact hedge with maximum freedom from "legginess" and "two story" effects.

Later pruning consists of trimming as often as appearance demands it. As the finished size is reached, the hedge should be trained to be somewhat wider at the base than on top. This allows sunlight to reach the lower leaves and prevents the loss of lower branches as the years go on.

DANIELS ESKIMO ROSES

The Hardest Everbloomers

The Rugosa Rose Hybrids, or Eskimo Roses, as they are often called because of their extreme hardiness, are the best roses for general growing throughout the Northwest as they are not only perpetual bloomers, most attractive in appearance of bloom, foliage and hips, highly fragrant, but are thoroughly hardy without winter protection in Minnesota and the Dakotas. The beautiful double blossoms are vastly superior to those of the old style single rugosa roses. They usually require no spraying and are the most easily grown of all the roses. They should be used frequently in the border as are the hardy shrubs. We offer the outstanding varieties. Roses on this page do not require winter protection.

Eskimo Rose Prices: 18-24 in. \$1.25 each; 2-3 ft. \$1.75 each

AGNES—A beautiful yellow Rugosa hybrid. Blooms early. Fragrant. Makes a full, compact bush of medium size. Blooms intermittently from June to September.

BELLE POITEVINE—A beautifully formed, vigorous rose of attractive foliage. A free and continuous bloomer of large, double bright pink flowers borne in clusters.

BLANC DE COUBERT—Snow white blooms, double and fragrant, and arranged in clusters. In form it closely resembles the Hansa, and like that variety is excellent for hedges. Thrives in the coldest places. Especially pretty in half open bud.

GROOTENDORST-SUPREME—Bright crimson. A new variety of unusual merit

commonly called "The Baby Rambler Rugosa Rose." Because of its iron-clad hardiness it may be used in shrub borders. With its continuous production of clusters of bright crimson bloom, it stands out strikingly from early summer until frost. An improvement over the old F. J. Grootendorst.

GROOTENDORST-PINK—Similar to the Red Grootendorst in form and manner of growth. The double, clustered flowers are a delicate shell pink.

HANSA—Deep red. One of the hardest, most dependable and most all around satisfactory of the red roses. The large, double red flowers have an attractive violet tinge, and are produced in great abundance from early summer until late fall.

THE "BUSH ROSES"

BLANDA (3-5 ft.)—Soft pink flowers in clusters. Comes almost thornless. Excellent bank cover and will grow in poor soil. Hardy everywhere.

2-3 ft., \$1.00; 3-4 ft. \$1.25

HUGONIS (Golden Rose of China)—Bears single flowers in long, arching sprays. Perfectly hardy. Makes a large, shapely shrub of 6 feet in height.

2-3 ft., \$1.75; 3-4 ft., \$2.00

HARRISON'S YELLOW—Yellow. A splendid old favorite and one of the finest shrubby types for the yard. Early in the season the entire bush is covered with a mass of beautiful, fragrant roses of deep golden yellow.

2-3 ft., \$1.75; 3-4 ft., \$2.00

RUBRIFOLIA—Intensely pink, starry flowers, borne freely on an erect 6 foot shrub with bluish foliage darkly tinged with crimson.

2-3 ft., \$1.00; 3-4 ft., \$1.25

ROSE CULTURE

Roses delight in a warm location where they will receive plenty of sunshine. They are at their best when not competing with larger plants for their moisture and light. The Rugosa Hybrids, however, seem to do well under the ordinary competition of other plants in the shrub border.

Any effort expended in making the soil rich will be generously rewarded with increase in both size and number of blooms. Roses, especially budded varieties, should be planted considerably deeper than they grew formerly.

At planting they should be pruned back to two or three stems with only four or five buds on each. The entire top should then be mounded up with dirt which should be left there until the buds start to sprout. A mulch of well rotted manure or peat on top of the soil will prove highly beneficial to the plants through the growing season.

In subsequent years the roses, excepting the climbers and the Rugosa Hybrids, should be pruned back heavily each spring, cutting out any short or spindly growth, or wood which shows winter injury, leaving each main shoot four to six inches long. Any shoots which come up from below the bud or graft should be cut away as fast as they appear.

Climbing roses should not be pruned back severely. The Rugosas are not headed back as heavily as other bush roses, although they should receive enough cutting each year to stimulate vigorous new shoots on which their flowers are borne.

In late fall those bush roses which require protection should have the ground heaped up around the base of the plants 10 to 12 inches high. After freezing the tops are usually tied up with hay or straw and around this is placed a wrapping of weather resisting paper. To protect the climbers they should be laid flat on the ground and covered in a similar manner to the bush roses.

DANIELS GAY, GREEN HARDY VINES

Pleasing Climbers That Screen, Cover and Beautify

Nothing provides a homelike and restful appearance more quickly than a covering of green vines for blank walls, bare fences and arbors. We are particularly fortunate in being able to offer the finest specimen vines we have had for many seasons.

BITTERSWEET—A native vine of rapid growth. The conspicuous red and orange fruits are attractive on the vine and, when dried, are often used as long lasting indoor bouquets. Succeeds in sun or shade. Always plant three or more vines to be sure of an abundant production of berries.

CLEMATIS HENRYI—A profuse bearer of enormous white flowers. Similar to Jackmani in manner of growth.

CLEMATIS JACKMANI—The most popular of the large flowering clematis hybrids. A strong grower and produces a mass of intense violet-purple flowers four to six inches in diameter, from July until October.

CLEMATIS MME. EDOUARD ANDRE—Manner of growth similar to Jackmani. Its striking velvety red flowers, about the same size as Jackmani, are produced profusely.

CLEMATIS PANICULATA (Sweet Autumn Clematis)—Flowers small, star shaped and creamy white. A luxurious grower, profuse bloomer and possessing fine foliage. Very fragrant.

GRAPE—BETA—Hardy as wild grape. Heavy fruiter. An unexcelled cover for arbors. See under fruits.

HONEYSUCKLE, SCARLET TRUMPET—This splendid variety with its interesting twining method of growth is generally considered the finest of the honeysuckle vines. Brilliant yellow throated scarlet flowers. Long blooming period.

IVY—BOSTON—Clings to rough surfaces. Small leaves; refined grower; brilliant fall color. The best "wall-clinging" vine.

IVY—ENGELMANNI—The best hardy vine for brick, concrete or stucco surface. Much smaller foliage and thicker than the common variety of Creeper. Red fall foliage.

IVY—VIRGINIA CREEPER—(American Woodbine) — Entirely hardy. A quick strong grower. Brilliant red fall foliage.

MATRIMONY VINE—Fine bank and ground cover and soil retainer. Large masses of purple flowers succeeded by bright scarlet berries.

RED

E. G. HILL—Great, massive blooms of deep velvety-maroon. Vigorous and free flowering.

GRUSS AN TEPLITZ — Deep crimson. One of the best for garden decoration. Not the largest, but a profuse and continuous bloomer of large clusters.

RED RADIANCE—An excellent, prolific producer of large, bright rose-red flowers of enchanting beauty.

PINK

THE DOCTOR—Enormous, semi-double, cupped flowers of satiny pink. Fragrant. One of the finest.

PAUL NEYRON—A low growing, bushy plant, producing gigantic rose-pink, fragrant flowers.

WHITE

FRAU KARL DRUSCHKI — One of the finest whites. Often called the "White American Beauty." Very large.

CALEDONIA—Long buds open to a large beautiful white of surpassing beauty and charm.

YELLOW

JOHANNA HILL — Large, yellow with bronze shadings in the center. A vigorous grower. Fragrant.

MRS. E. P. THOM — A beautiful, bright canary yellow. Large, well shaped flowers borne in profusion.

TWO TONE

TALISMAN—Brilliant red and gold buds opening to well shaped blooms of scarlet orange and rich yellow.

EDITH NELLIE PERKINS—One of the finest two-tones. Definitely pointed buds, opening to rich orange outside with salmon pink inside.

EXCELSA

FOUR OUTSTANDING NEW PATENTED "TEAS"

(Prices as noted)

LOWELL THOMAS (Pat. No. 595)—Clear canary yellow. Large and very double (35 to 40 petals). Vigorous, compact and bushy. A. A. R. S. award for 1944. \$1.50 each.

TALLYHO (Pat. No. 828)—One of the finest. Inside coloring varying shades of pink—outside of petals rich crimson. Buds cardinal red. Long lasting. Spicy fragrance. A. A. R. S. award for 1949. \$2.00 each.

MIRANDY (Pat. No. 632)—First place winner of All American Rose competition for 1945. Rich, dark red with black shadings. Large and very double (50 petals). Marvelously fragrant. \$1.50 each

PEACE (Pat. No. 591) — "Almost unbelievable!" One of the largest roses—up to 5 inches. Alabaster, edged with pink, deepening as the flower opens. This rose has everything. \$2.00 each.

FLORIBUNDA ROSES

(Prices as noted)

FLORADORA—A beautiful scarlet and geranium. Intensely doubled flowers of 25 petals. Stands 2 to 2½ ft. high. A. A. R. S. award of 1945. \$1.25 each.

PINOCCHIO (Pat. No. 484)—Buds salmon-flecked gold opening to miniature hybrid tea like roses of clear pink in great clusters \$1.50 each.

SUMMER SNOW (Pat. No. 416)—Low, broad plants. Splendid for foreground rose plantings. The large clusters of buff cream buds open to clear, double 3½-inch white blooms. \$1.50 each.

Climbing Roses

2 year Standard.....\$1.00 each
2 Year Select 1.25 each

DOROTHY PERKINS — A hardy free grower bearing masses of clustered double flowers of delicate shell pink.

DR. VAN FLEET—Enormous flowers of light pink freely borne on long stems. Very fragrant.

EXCELSA—Similar to Dorothy Perkins in growth habit and flowering, but of a deep red hue.

GARDENIA—The most satisfactory yellow climber. Large flowers borne in profusion.

PAUL'S SCARLET — Sometimes called "The reddest rose that grows." Large, long lasting flowers.

Blaze

(Pat. No. 10)

A relatively new and very popular patented rose. A vigorous free flowering climber with large scarlet-crimson flowers. A recurrent bloomer. One of the finest new climbers.

Strong 2 year plants, \$1.50 each

DANNY SAYS:

NOW YOU CAN BUY A COMPLETE, RELIABLE ROSE SPRAY!

We use and recommend Cloverset Clotracide for Rose spraying. Combined in this one spray are materials which control Black Spot, Mildew and other fungus diseases, sucking insects, such as aphids, leaf-eating insects, and pests—such as rose slugs which skeletonize foliage. You can buy it when you drive out to Daniels.

Handy HOME SIZE package (makes 5 gallons of spray) only 75c.

Daniels Lawn Trees

Shade trees are a long-time investment, so select with the utmost care. While hard wood types grow more slowly and have greater permanency, the faster growing soft woods have very definite and important place in your outdoor living room. Select yours from our large stands of Northern Grown trees. Another reason for driving out to see us. Sizes are given in height thru 8-10 ft.; larger sizes in inches of caliper.

Only 3-4, 4-5 and 5-6 foot sizes are available. Add 10% for postage.

GREEN ASH—A very hardy native tree of tall, straight, clean growth habit with round head and dense foliage. Leaves out very late in spring. Foliage turns bright yellow in early fall. 5-6 ft. \$1.00; 6-8 ft. \$1.50; 8-10 ft. \$2.60; 1-1½ in. \$4.25; 1½-2 in. \$5.75; 2-2½ in. \$7.50; 2½-3 in. \$11.00.

BASSWOOD (American Linden)—A hardy rapid growing tree of large size, forming a broad, round top. Large oval leaves, dark green above, light green below. Small, creamy white, highly scented flowers. 6-8 ft. \$3.00; 8-10 ft. \$4.00; 2 in. \$5.75; 2½ in. \$7.50.

WHITE BIRCH—A beautiful, graceful, upright growing tree of medium size, famed for its striking white bark. Effective when planted singly or in groups. Clusters of three or four planted in one clump will give the most desirable and most naturalistic effect. 5-6 ft. \$2.00; 6-8 ft. \$3.00; 8-10 ft. \$4.00; 1-1½ in. \$5.00.

CUT LEAF WEEPING BIRCH—One of the most admired of all lawn trees. Noted for its unusually soft and graceful character and outline. Its leaves are finely cut and its branches long, slender and drooping. Possesses the same attractive white bark as the White Birch. 5-6 ft. \$3.75; 6-8 ft. \$5.50; 8-10 ft. \$6.50.

BUTTERNUT—A rapid growing, attractive native tree which produces large crops of edible, thick meated nuts of excellent quality. May be used as a lawn tree and is well adapted to planting in groves or woodlots. 6-8 ft. \$3.00.

BECHTEL'S CRAB—A beautifully formed small tree famed for its beautiful rose-like, pink blossoms of spring. Suitable to use in border plantings or as a lawn specimen. The leaves are exceptionally subject to summer and fall spotting from apple rust. Produces no fruit. 3-4 ft. \$2.25.

HOPA CRAB—One of the most popular and attractive of the highly colored, spring flowering ornamental crabs. In early May the tree is covered with a mass of pink to reddish flowers. These are followed in the fall by small to medium red crabs which are borne profusely. A more delightful small tree for a restricted space could not be found. This tree stands far above other flowering trees in daintiness and grace. 3-4 ft. \$1.50; 4-5 ft. \$2.00; 5-6 ft. \$2.50; 6-8 ft. \$3.50.

CRAB, RED SILVER—A valuable new addition to the small ornamen-

tal trees of the Northwest. Early spring flowers are deeper and more brilliant in hue than Hopa, but not quite as large. Foliage has a distinctly reddish color, overcast with silvery pubescence. Prices same as Hopa Crab.

AMERICAN ELM—The most popular and widely used shade tree in the Northwest. It is unexcelled for shade, street, and lawn plantings. A rapid grower and very long lived, attaining tremendous size as time goes on.

Prices on American Elm

5-6 ft. \$1.00; 6-8 ft. \$1.50; 8-10 ft. \$2.60; 1-1½ in. \$4.25; 1½-2 in. \$5.75; 2-2½ in. \$7.50; 2½-3 in. \$11.00; 3-3½ in. \$16.00; 3½-4 in. \$22.00.

CHINESE ELM—A very rapid growing small leafed elm introduced a few years ago from China. An attractive tree which gives quick shade. Short lived. 5-6 ft. \$1.00; 6-8 ft. \$1.50.

MOLINE ELM—The Moline Elm is an outstanding selection from the American Elm. It is propagated vegetatively by budding, and consequently the trees grow with extreme uniformity. It is an American Elm in every respect, but because of its uniformity and excellent branching habit it is preferable to the ordinary seedling grown American Elm. 5-6 ft. \$1.25; 6-8 ft. \$1.75.

HACKBERRY—A splendid hardy, large native tree. Vigorous and healthy, it thrives in all types of soil. Makes a very tall upright tree with strong horizontal branches but does not produce the arching effect of the elm. In middle summer it bears profuse loads of small bluish berries which are very popular with our birds. Prices same as American Elm.

HAWTHORNE—Small thorny tree with horizontal branching—kin to native Thornapple. Showy, white flowers followed by small red apple-like fruit. A desirable ornamental subject and should be planted more. 3-4 ft. \$1.50; 4-5 ft. \$2.50; 5-6 ft. \$3.50.

HORSE CHESTNUT—One of our finest and most decorative large shade trees. In the nursery it is slow growing and difficult to grow—but when established in its permanent location makes a strong growth. The enormous, showy flowers of early spring are followed in the fall by clusters of chestnut-like nuts. A splendid tree. 3-4 ft. \$2.00; 4-5 ft. \$3.00; 1½-1½ in. \$5.50; 1½-2 in. \$8.00.

KENTUCKY COFFEE TREE—A most interesting tree. Very hardy. White flowers borne profusely in spring are followed in fall by long flat pods containing seeds about ½-inch in diameter. As the name im-

HARD MAPLE

DANIELS TREE PROTECTIVE SERVICE

A good tree is one of the most valuable assets a piece of property can possess. It is a part of one's domain, so treasured, so truly valuable that its well being must be conscientiously guarded. If you list among your treasures one or more fine trees you will be interested in DANIELS TREE PROTECTIVE SERVICE—the best and safest form of "insurance" you can write for them.

We can serve you efficiently and economically whether it be a matter of LIGHT TRIMMING, HEAVY PRUNING, BRACING, FEEDING, SPRAYING, TREE SURGERY, OR OTHER TREE WORK.

We will be glad to consult with you regarding the welfare and preservation of your valuable specimens and to suggest the care necessary for their continued health and long life.

Graceful Weeping Willows Furnish Beautiful Backgrounds and Effective Screens.

plies, the seed has been used as a poor substitute for coffee. 1½-2 in. \$7.00; 2-2½ in. \$9.00; 2½-3 in. \$12.00.

THORNLESS LOCUST — Another valuable tree of dainty, lacy foliage and attractive flowers followed by pods larger than those of the Common Locust. Free from thorns. 5-6 ft. \$1.25; 6-8 ft. \$1.75; 8-10 ft. \$2.60. Larger sizes same as American Elm.

HARD MAPLE (Sugar Maple) — One of our most desirable shade and ornamental trees. A symmetrical tree of great beauty and deep rich green coloring, producing a very dense shade. The most beautiful fall colored foliage of any of our shade trees. 5-6 ft. \$3.50; 6-8 ft. \$4.50; 8-10 ft. \$6.00; 1-1½ in. \$9.00; 1½-2 in. \$12; 2-2½ in. \$15.00; 2½-3 in. \$18.00.

SCHWEDLER'S MAPLE — One of our most beautiful and colorful shade trees, famed for its beautiful red foliage in spring. As the leaves open up in the spring they take on a bright purplish or crimson color which later turns to a deep rich green frequently retaining a dark purplish tinge in the veining. Similar to the Norway in bark, leaves, and form except for its striking color and somewhat smaller ultimate size. 5-6 ft. \$4.00; 6-8 ft. \$5.50; 8-10 ft. \$7.50.

SILVER MAPLE (Soft Maple) — A hardy, quick growing shade tree of real value. Eventual size somewhat similar to American Elm, but the head is more rounded in form. After the tree is twenty-five years or so old the smaller wood is more brittle than in the elm and shows more tendency to have small branches break off in wind storms. Prices same as American Elm.

WIER'S CUT LEAF MAPLE — A graceful, refined, rapidly growing

tree remarkable for its pendulous drooping branches (definitely weeping) and deeply and delicately cut leaves. One of our most graceful lawn trees. 2-2½ in. \$9.00; 2½-3 in. \$12.00; 3-3½ in. \$16.00.

MOUNTAIN ASH — One of the most widely used and most popular of the small lawn trees. Its large white flowers of spring are followed by clusters of orange berries which cling to the tree throughout the winter. Graceful, spreading branches and small compound leaves. 5-6 ft. \$2.50; 6-8 ft. \$3.00; 8-10 ft. \$4.00; 1-1½ in. \$5.00; 1½-2 in. \$6.00.

RUSSIAN MULBERRY — Low growing bushy-topped small tree. Hardest of the Mulberrys. The red fruit shaped like blackberries is edible and loved by birds and preferred by them to other fruits. Stands shearing well. 5-6 ft. \$1.50; 6-8 ft. \$2.50; 8-10 ft. \$3.50.

BOLLEANA POPLAR — The most desirable of all the slender, upright growing trees. Its definitely columnar form and glossy green leaves, with downy white undersides, have made it extremely popular wherever a strong vertical effect is desired in the landscape. Bark is smooth and greenish gray. 5-6 ft. \$1.50; 6-8 ft. \$2.00; 8-10 ft. \$2.50; 1-1½ in. \$3.00; 1½-2 in. \$4.00; 2-2½ in. \$5.00.

LOMBARDY POPLAR — The most widely used of the slender, vertical, accent trees. Hardy and very quick growing. Moderately short lived. Unsurpassed for a rapid, full growing tree of vertical upright accent type. 4-5 ft. 50c; 5-6 ft. \$1.00; 6-8 ft. \$1.50; 8-10 ft. \$1.75; 1-1½ in. \$2.50; 1½-2 in. \$3.00; 2-2½ in. \$4.00.

SECONDS . . .

THAT SHOULD COME FIRST IN YOUR CONSIDERATION

Every year we find a certain percentage of the shade trees we are growing fail to measure up to our high standard for specimen lawn trees. Because of slight crookedness, lack of branch balance or some other imperfection they are graded as "SECONDS".

As far as vigor and ability to grow and make a good tree is concerned these are as good as any. However, because of these small imperfections we offer these at ridiculously low prices—less than half the usual price.

These are ideal trees for screens, woodlots and for establishing a replacement program in groves which are "thinning out." May we quote you on these, or better yet show them to you in our nursery?

NORWAY POPLAR — One of our fastest growing and hardiest trees of its type. Excellent for quick shade or screen and for windbreaks. Somewhat similar to the cottonwood in growth but free from annoying seed-carrying "cotton." 5-6 ft. 75c; 6-8 ft. \$1.25; 8-10 ft. \$1.50; 1-1½ in. \$2.00.

BLACK WALNUT — A splendid, hardy, native tree of fairly rapid growth, large size, with a beautiful spreading, rounded head. In fall it bears large crops of the familiar black walnuts—a delicious edible nut. The wood is of exceptional value. It may be used as a lawn tree and is excellent in grove and woodlot plantings. 5-6 ft. \$2.00; 6-8 ft. \$3.00; 8-10 ft. \$4.00.

GOLDEN WILLOW — The largest and fastest growing of the better willows. The young wood takes on a beautiful golden hue with the first warm days of late winter and early spring. Not a desirable lawn tree. 5-6 ft. \$1.00; 6-8 ft. \$1.75; 8-10 ft. \$2.50; 1-1½ in. \$3.25; 1½-2½ in. \$4.25.

NIOBE WEeping WILLOW — The best of the Weeping Willows. While it is a very rapid grower, it is perfectly hardy. A clean type of tree, free from most of the litter of broken branches and other trash so common in some willows. Its form is that of a graceful weeping tree with long, slender, hanging, swaying branches. The bark is a beautiful golden yellow, making it exceedingly attractive both in summer and winter. 5-6 ft. \$1.75; 6-8 ft. \$2.75; 8-10 ft. \$4.00; 1-1½ in. \$5.00; 1½-2 in. \$6.00.

Plan to Plant Another Tree

Daniels Beautiful Evergreens

No planting is truly complete without some evergreens.

During the winter they form a most attractive part of one's planting, and during the summer their splendid colors and varying forms add a note of interest to even the most elaborate landscape effect.

As specimen trees in front of the home they are perhaps second to none in popularity. Their importance in foundation plantings has increased so rapidly in the last few years that now a foundation planting seems incomplete without them. No other plants can so effectively and completely provide a windbreak or screen for they are there to serve you throughout the winter and summer. Whether in the foundation planting, border planting, screen or windbreak, evergreens give what no other trees can—twelve months of complete service and beauty.

(Evergreens are not shippable. Should be picked up or delivered)

The Arborvitae

AMERICAN—The most popular of the larger growing varieties. It can be trimmed to secure compact trees or allowed to grow naturally. Dependable under any average conditions of soil and care. A beautiful, deep green tree of soft, thick foliage texture. 24-30 in. \$3.50; 30-36 in. \$4.50; 3-4 ft. \$7.00; 4-5 ft. \$12.00; 5-6 ft. \$17.00; 6-7 ft. \$22.00; 7-8 ft. \$30.00.

GLOBE—A dwarf, bushy evergreen that naturally forms itself into a ball-like form. Bushy and compact. Keeps its shape without trimming attention. Splendid for foundation plantings, tub plantings or low borders. One of the best all-around semi-formal dwarfs. 15-18 in. \$4.75; 18-24 in. \$5.50; 24-30 in. \$7.50; 30-36 in. \$9.50.

PYRAMIDAL — The most compact and erect of the species, forming a solid pyramid of green that retains its slender shape without shearing. However, it may be made more compact and kept at any desired height by trimming. Probably the most generally satisfactory and widely used of all pyramidal type of trees. 24-30 in. \$4.50; 30-36 in. \$6.00; 3-4 ft.

PYRAMIDAL ARBORVITAE

\$8.50; 4-5 ft. \$13.00; 5-6 ft. \$17.00; 6-7 ft. \$24.00; 7-8 ft. \$32.00.

SIBERIAN—A compact, dense, and bushy plant. Conical in outline. Foliage a rich dark almost bluish-green. The hardiest of the Arborvitae. With its distinctive size, form and foliage texture fills a place in the landscape that no other evergreen does. 18-24 in. \$5.50; 24-30 in. \$7.50; 30-36 in. \$9.50.

The Firs

BALSAM—The native balsam found in northern Minnesota. The foliage is dark green above and silvery beneath. Makes a handsome, rather compact, erect pyramidal tree of fairly rapid growth. Endures moderate shade and moist conditions very satisfactorily. 30-36 in. \$7.00; 3-4 ft. \$8.00; 4-5 ft. \$11.00; 5-6 ft. \$14.00; 6-7 ft. \$20.00.

DOUGLAS — A rapidly growing, large, symmetrical tree. Deep green to bluish-green foliage of pleasing softness. The hardiest and most widely used of the firs. It deserves wider usage. Does equally well in full sun or partial shade. Prices same as on Balsam Fir.

The Hemlocks

CANADIAN HEMLOCK—The hardiest of our Hemlocks. Does especially well in shaded locations unsuited to most evergreens. Upright in form and graceful in habit. It is the answer to the old, old question of what to put in "that difficult northeast shaded corner." Should have winter protection in exposed places. 2-3 ft. \$9.00; 3-4 ft. \$12.00.

The Junipers

ANDORRA—A low growing, spreading, dwarf evergreen of real merit. Its rich silvery green of summer turns to a beautiful purplish bronze in fall. As the sap starts to move in the spring, this color intensifies and becomes truly striking. With the coming of new growth its more somber green hue is resumed for the

PFITZERS JUNIPER

rest of the warmer months of the year. 15-18 in. \$5.00; 18-24 in. \$6.50; 24-30 in. \$8.00; 30-36 in. \$10.00; 3-4 ft. \$12.00.

CANADIAN—A medium height to low spreading Juniper with sharply pointed leaves of grayish-green color marked on the upper surface by broad silvery-white bands. Rather too spreading to use in foundation plantings but excellent for entrance and border plantings. Prices same as Andorra Juniper.

GOLDEN CANADIAN—We consider this the finest colored of the golden evergreens. Similar in habit of growth to the Canadian, but not as fast growing nor as large eventually. The new tips take on a beautiful golden yellow color. A fine plant for color contrast. Prices same as Andorra Juniper.

PFITZER — One of the low evergreens most widely used in foundation plantings. A graceful, broad, low evergreen with sweeping fronds of grayish or bluish-green foliage. The strong tips give a definite horizontal line to its effect. By nature it stays fairly close to the ground but may be trained to reach a height of four or five feet. Prices same as Andorra Juniper.

RED CEDAR—The most widely used of the upright accent Junipers—but not necessarily the best. A native plant of extreme hardiness. In fall it loses its green color and takes on a reddish-brown tinge which persists until new growth starts in the spring. Is an alternate host for apple rust and consequently subject to the production of undesirable "cedar apples." 30-36 in. \$5.50; 3-4 ft. \$8.00; 4-5 ft. \$12.00; 5-6 ft. \$15.00; 6-7 ft. \$22.00.

PROCUMBENS (Japonica or Japanese Juniper)—A hardy rapid growing prostrate juniper with fine color both summer and winter—a rich, deep green with slightly bluish cast. The short, closely grouped leaves,

or needles give the plant a most attractive "tufty" appearance. More tolerant of shade than most junipers. One of our finest prostrate junipers. **Prices same as Andorra Juniper.**

SABINA HORIZONTALIS (Coast of Maine)—An excellent low creeper, with fingerlike tips trailing out on the ground. The flatish needle formations grow in a definite vertical manner. Deep green throughout the growing season and tipped with a rich brown with the approach of winter. An excellent ground cover type. **Prices same as Andorra Juniper.**

SAVIN—Another of the three most popular low foundation evergreens. More compact and a deeper, richer green than the Pfitzer. While growing in an upright, spreading, horizontal manner, the tips are more heavily branched or tufted so that the plant seems more compact and without the horizontal tip effect achieved by the Pfitzer.

Prices same as Andorra Juniper.

The Grafted Junipers

CHANDLER'S — One of the best known of the true silvers. Foliage a beautiful silvery blue during the growing season and only slightly less colorful in the winter month. 3½-4 ft. \$13.50; 4-5 ft. \$16.75.

DUNDEE — The most symmetrical and compactly self-forming of the upright Junipers. Characteristically solid and well filled out to the ground. The color is silvery green, but not as strong a silver as the other varieties listed. One of the hardiest and most generally satisfactory of the grafted junipers. 2½-3 ft. \$9.50; 3-3½ ft. \$12.00; 3½-4 ft. \$13.50; 4-5 ft. \$16.75; 5-6 ft. \$21.50.

WELCHII—One of the newest silver varieties. Equal or superior to the Chandlers in color, but more compact with a definite upright or vertical growth to the new tips. 3-3½ ft. \$12.00; 3½-4 ft. \$13.50; 4-5 ft. \$16.75.

The Pines

AUSTRIAN—Commonly considered to be the best of the large growing pine trees for landscape purposes. The needles are straight, slender and 4 to 5 inches in length. Deep, rich green in color. The tree is very symmetrical in form and a rapid grower. 24-30 in. \$5.50; 30-36 in. \$7.00; 3-4 ft. \$9.00; 4-5 ft. \$13.00; 5-6 ft. \$19.00; 6-7 ft. \$25.00; 7-8 ft. \$35.00.

MUGHO—These are the low and compact forms of the dwarf pines. They can be sheared and kept low or allowed to grow larger. Exceedingly hardy. Deep green foliage with candlelike new growths. One of the three best low "foundation" evergreens. 15-18 in. \$5.00; 18-24 in. \$6.50; 24-30 in. \$8.00; 30-36 in. \$10.00; 3-4 ft. \$12.00.

NORWAY—A fast growing, open type of pine. Characteristic reddish bark. Best used in background or

group plantings and for naturalizing in miniature pine groves. **Prices same as Austrian Pine.**

PONDEROSA—Somewhat more open and less symmetrical than the Austrian pine but nevertheless a highly desirable tree. Produces a rugged effect in the landscape. Very long needles. A fast grower. **Prices same as Austrian Pine.**

SCOTCH—One of the hardiest and fastest growing of the pines. Shorter needled than Austrian or Ponderosa, much more open, less regular and sometimes appears "windblown" in effect. Splendid for mass plantings and naturalizing treatments. **Prices same as Austrian Pine.**

WHITE—The native White Pine of our Northern Minnesota woods. Needles very soft. Because of its rapid growth and lighter side branching it gives a more open effect than most of the other large growing pines. **Prices same as Austrian Pine.**

The Spruces

BLACK HILLS SPRUCE—One of the hardiest and finest of all spruces—symmetrical, compact and bushy in growth. The foliage varying from a green to bluish-green tint makes the trees always striking for their bright, fresh color. Needles are somewhat shorter and much softer than those of the Colorado Spruce. One of the finest Spruces for landscape purposes. 15-18 in. \$3.50; 18-24 in. \$4.00; 24-30 in. \$6.00; 30-36 in. \$8.00; 3-4 ft. \$10.00; 4-5 ft. \$15.00; 5-6 ft. \$20.00; 6-7 ft. \$27.50; 7-8 ft. \$35.00.

COLORADO BLUE SPRUCE—The most popular novelty for planters of the northern states. Its brilliant blue-green color, neat compact form and symmetrical habit of growth, makes it invaluable in landscape work. The glory of the Blue Spruce is in its intense steel-blue foliage. 24-30 in. \$9.00; 30-36 in. \$11.00; 36-42 in. \$13.00; 42-48 in. \$15.00; 4-4½ ft. \$18.00; 4½-5 ft. \$21.00; 5-6 ft. \$27.50; 6-7 ft. \$35.00; 6-8 ft. \$45.00.

COLORADO GREEN SPRUCE—A very fine tree. Similar to Colorado Blue Spruce in all its respects except in color. The foliage is a rich, glossy, deep green and is well adapted to planting in groups with Colorado Blues for color contrast. **Prices same as Black Hills Spruce.**

NORWAY SPRUCE—One of the hardiest and thriftiest of the evergreens. Heavy masses of deep green foliage. For quick growth there is probably no evergreen their equal. 3-4 ft. \$8.50; 4-5 ft. \$12.00.

EVERGREEN "CASH & CARRY" BUDGET BUYS

We offer this year a fine assortment of small sized evergreens in Cloverset Pots. These dandy trees, while not as effective at the outset, will quickly size up and make as fine a planting as any.

**MAKE YOUR SELECTIONS AT
OUR GARDEN SHOP**

COLORADO BLUE SPRUCE

The Yews

TAXUS CUSPIDATA CAPITATA—This variety of Japanese Yew develops a single stem growing in an upright, symmetrical branched form. Good for very shady locations. 18-24 in. \$11.00; 24-30 in. \$14.00; 30-36 in. \$21.00.

TAXUS CUSPIDATA—Low spreading type of Yew. Excellent for low foundation plantings where heavy shade precludes the use of other low evergreens. 15-18 in. \$9.00; 18-24 in. \$11.00; 24-30 in. \$14.00.

TAXUS CUSPIDATA INTERMEDIA—Dwarf, spreading type of above. Exceptionally compact, and a rich deep green. 15-18 in. \$11.00; 18-24 in. \$14.00.

TAXUS CUSPIDATA NANA—One of the richest, deepest greens of all—almost "blackish" in color. Very dwarf and compact. Truly picturesque. 12-15 in. \$9.00; 15-18 in. \$11.00; 18-24 in. \$14.00.

HOW TO PLANT EVERGREENS

The hole for planting an evergreen should be at least one foot larger than the ball of earth and deep enough to allow placing the tree slightly deeper than it stood in the nursery. Place the tree in the hole, loosen and pull back the burlap covering and fill the hole three-quarters full of good soil. Firm it well. Fill once or twice with water and allow it to soak into the ground before putting on more soil. A slight basin or depression should be left to facilitate later waterings. Water evergreens freely throughout the summer. A mulch of straw or peat will prove highly beneficial.

TWO STYLES

PATENTED PICKET AND ESTATE FENCE

The fence illustrated above is the popular ESTATE FENCE of sturdy square posts and three patented locking rails. It is one of the most attractive, least expensive and most satisfactory of all fences.

The fence illustrated to the right is the ever popular PICKET FENCE type. These come in 7 foot sections with the "pickets" fastened to the rails with cadmium plated rust proof screws and washers. As fine and durable as a picket fence can be.

BEAUTIFUL FENCES

The Crowning Glory of a Well Landscaped Home

These beautiful "Concord" fences of Western Red Cedar fill a long felt need for an attractive, easily erected, durable fence. They may be easily and quickly erected by anyone capable of digging post holes in a line and "truing them up."

Their patented, interlocking design makes their erection simple, quick and fool proof. The durable cedar of which the fences are made is coated with priming oil so the fence can be left natural to weather to a beautiful brown or, if preferred, it may be painted.

DANIELS HARDY PERENNIALS

The Chinese Philosopher has said, "One picture is worth a thousand words." We go further and say that, particularly when buying nursery stock, seeing the actual plants is equal to a thousand pictures. Why not drive out and select your plants.

Use perennials to paint your Spring, Summer and Autumn flower pictures. They are the "finishing touches" for the informal border or a formally laid out garden. Their unlimited assortment of bloom, size and color makes them indispensable for working into all parts of the border where their brilliant hues add that pleasing zest to the planting without which it would be incomplete.

Our field grown plants, produced on specially prepared soils abounding in humus and plant food, have those exceptionally fibrous roots and strong crowns and tops that careful gardeners insist upon.

All varieties whose root systems permit it are dug with ball of dirt around the root, except, of course, when they are shipped. When shipped they come to you without soil but roots are carefully packed and protected.

IRIS

40c each; \$4.00 per dozen

BEARDED IRIS

CAPRICE—Large yellow
 ETHELWYN DUBAR—Fragrant orchid pink
 EUPHONY—Copper with violet
 EVOLUTION—Pale copper bronze overlaid blue
 GERTRUDE—Dark blue
 GOLDEN IMPERIAL—Chrome yellow
 LT. WILLIAMSON—Violet with royal purple
 MADAM CHEREAU—White with blue edges
 NENE—Large, lilac and old rose
 PALLIDA DALMATICA—Clear lavender blue to pale silvery blue
 PLUIE DOR—Tall, solid brilliant golden yellow
 PRAIRIE GOLD—Rich yellow
 PRINCESS BEATRICE—Light blue
 ROSE DOMINION—Velvety rose pink
 ROSE PETAL—Clear rose, petal pink, sweet scented
 SHERWIN WRIGHT—Fine golden yellow without shadings or markings
 SIERRA BLUE—Tall, clear medium blue
 SUSAN BLISS—Orchid pink
 ZUA—Pearl gray

MINIATURE IRIS (PUMILA)

FAIRY—Very dwarf, a dainty light blue
 DWARF PURPLE
 JEAN SIRET—Yellow everbloomer

SIBERIAN IRIS—Blue Shades

SPECIAL

12 assorted Iris—unnamed—from the above list — ONLY \$2.50 postpaid.

GARDEN CHRYSANTHEMUMS

New Northern Bloomers DeLuxe

We consider these hardy Mums the finest addition of many, many years to our fall garden bloomers.

They are so colorful, so widely varied in type and hue and such profuse and long lasting bloomers that no planting is complete without them.

From late August until hard freezes (ordinary frosts do not bother them) they bring to the garden generous splashes of color never possible before.

The varieties listed below are some of the finest of all—each one especially desirable for our short northern season.

CHRYSANTHEMUMS

(M) denotes U. of M. origination.

ONLY 30c EACH

ALGONQUIN—Yellow, early, tall.
 AVALANCHE—Large, white with creamy center.
 BOUNTIFUL—(M) Large, carmine to ox-blood.
 CHIPPEWA—(M) Large, purple, medium early.
 EUGENE WANDERER—Yellow, early.
 HEATHERBLOOM — Heather-pink, rose red center.
 JOAN HELEN—Bordeau purple, yellow center. Most showy of cushion type.
 MAROON & GOLD—(M) Large, red to maroon.
 MOONLIGHT—(M) New, 3 inches of white and ivory.
 PINK CUSHION—Pink and variations. Late.
 RED GOLD—(M) Dahlia like scarlet, brazil red.
 SEPTEMBER BRONZE—Golden bronze, cushion pompon.

COLLECTION C-1—POTTED

12 of the above varieties—our selection. ONLY \$3.25, Postpaid

TEN EXTRA CHOICE PHLOX

Only 50c Each, Postpaid

"Indispensable" is one way of designating the summer flowering Phlox. Their strong vigorous growth, their ease of culture, and their profuse blooms of widely assorted colors make them a truly indispensable "must" in every flower border.

Many of the newest and most choice varieties are found in our list. From them can be chosen fine assortments to delight the most exacting Phlox enthusiast. Our plants are strong field grown individuals.

ANNIE LAURIE—Rich deep salmon. Large trusses. About 3 feet tall.

CHARLES CURTIS—An unusual and distinctive color, sometimes described as Sunset Red.

Fine strong grower. Large flower head.

FAIRY KING—The loveliest lavender. Large, rounded, shapely flower heads. Rich green foliage.

FLASH—A new, large rosy red. One of the best.

IRENE—One of the best cherry red Phlox. Medium height with bronzy green foliage.

JULY LIGHTS—Flowers early, medium height. Soft, light red with blood red eye.

LILLIAN—Pure pink without a trace of magenta or rose. Large florets.

MARY LOUISE—One of the best white Phlox. Pure white with large heads. Individual florets often 2 inches across. Fragrant.

MISS LINGARD—Large white heads with delicate pink shading in center. The best early white Phlox known.

PINKETTE—Large florets of delicate pink. A Phlox of unusual beauty.

PROGRESS—Superb light blue, handsomely set off with deeper purple eyes. Extra large.

"BUDGET BUYS" IN PERENNIALS

We have potted Perennials. While they are a lighter grade than our field grown plants they will give you excellent results and they move with absolutely no check in growth. Ready to go! Sorry, but this item does not mail well.

While we do not have all the varieties listed on our perennial pages in these potted plants, we do have a fine assortment and most of the more important varieties.

You'll be delighted with these dollar stretchers, mostly priced at only 25c

GLADIOLI

Who needs to be told about Glads? When you tell the truth about them you sound like a liar because it takes such a long list of superlatives to do them justice. No other plant yields such beautiful flowers for so little time and effort. They lend themselves to so many purposes! Gorgeous, colorful blooms for cut flowers or outdoor display . . . see what I mean.

Glads should be dug each fall before the ground starts to freeze and stored in the cellar. Our bulbs are the strong, heavy size. Order now. Your bulbs will be on hand at proper planting time. Here is our fine list—some of the newest and best:

AUTUMN GOLD—Golden yellow, bordered with orange.

BLACK OPAL—Deep maroon, shaded to black.

BLUE BEAUTY—An old favorite of medium blue.

MARGARET BEACON—Pure white with cherry throat.

PICARDY—An outstanding variety of shrimp-pink.

RED CHARM—One of the finest, clear reds.

ROSA VAN LIMA—Tall, beautiful, light pink.

SNOW PRINCESS—Pure white with creamy throat.

Prices on the above Glads: 3 for 30c; 6 for 50c; 12 for 90c; 25 for \$1.50.

RAINBOW MIXTURE—An assortment of the above varieties:
12 for 85c; 25 for \$1.40; 100 for \$6.25

Hardy Northern Grown Fruit Trees and Plants

DANIELS HARDY APPLES

Having been extensive orchardists as well as nurserymen for well over thirty years, we feel that we know apple values pretty well—both from a home and a commercial orchardist's point of view. There are probably several hundred different kinds of apples being grown in Minnesota and adjacent territory—but only a few of them are really worth while.

The varieties listed on these three pages comprise what we consider to be the very best of them all. Each has its especial merit and value. Our descriptions point these out, so that even the novice can make a wise selection. However, we will be happy to aid anyone in choosing a list for any particular location or purpose.

Now—right in our own yards and home and commercial orchards—we can grow as fine apples as are produced anywhere in the world.

Plant—and plant now—the marvelous new sorts . . . and remember, too, that the older Duchess, McIntosh, Wealthy, and others listed here are just as good as ever . . . and each has its important place.

SIX NEW SUPER APPLES THAT ARE REALLY "SUPER"

DANIELS APPLE PRICES

Only the standard and medium sizes are available. Add 10% if to go by mail.

Chestnut

(Minn. No. 240)

The New Super Crab

After 25 years of thorough testing, the University of Minnesota has just named this delicious crab—thereby giving it the official stamp of recommendation.

Chestnut's Points of Superiority: Hardy throughout Minnesota. . . . Highly productive. . . . Season—past Whitney. . . . Keeps 2 to 3 months. . . . Good red color. . . . Delicious, nut-like flavor. . . . Good for sauce and pickling. . . . Large—about 2 inches across. . . . Disease resistant.

The wise planter will use Chestnut freely.

Fireside

(Minn. No. 993)

The New "Northern Delicious"

We consider FIRESIDE to be the one Highest Quality Apple for Minnesota. A "must" for all apple planters, home or commercial.

The latest, and many say the best, of the all-winter apples yet introduced by the great Minnesota Fruit Breeding Farm. Extremely hardy for a tree producing such high quality fruits, Fireside has proven dependable in all but the extreme Northern part of Minnesota. The tree is vigorous, highly productive, and a regular annual producer of large crops. The fruit is large, colored a beautiful red, clings well to the tree, and keeps all winter.

In flavor the fruit is described by the originators as rich, sub-acid, almost sweet, with a crisp, firm juicy flesh.

Commercial growers please write for prices on larger quantities.

Minjon

(Minn. No. 700)

The "Minnesota Jonathan"

The reddest, all-red, red apple of Wealthy season. Thorough test has proven its worth for both home and extensive commercial growing.

Hardy throughout all of Minnesota. A regular bearer of uniform size. . . . It clings to the tree until picked. . . . It comes in Wealthy season but colors much better. It has an excellent flavor and quality. It tops the market in its season.

As the name implies it is so closely similar to the Jonathan that it is commonly called the "Minnesota Jonathan," and its name, "Minjon" is so derived.

Minnesota No. 790

The Northwest's Best Baking Apple

A big, new apple with a rich, solid red color. A regular bearer of good quality that has been proven by exhaustive tests to be the best baking apple we can grow in Minnesota.

Far superior to our older varieties in this respect. It is equal in baking qualities to the famed Rome Beauty . . . heretofore the acknowledged "King of the Bakers."

An excellent quality, crisp, attractive dessert apple that is an excellent winter keeper. Will undoubtedly be named soon by the University Horticultural Experts.

Redwell

(Minn. No. 638)

The New "Winter Wealthy"

This fine, red apple has just been named by its originators, the University of Minnesota, thereby giving it the official stamp of approval.

Similar to the Wealthy in appearance—but so, so much better in most respects that it is in a class by itself.

A beautiful red in color, a regular fruiter, uniform in size, excellent in quality, clings to the tree through harvest. One of the very best of our new varieties.

Season late—usually harvested in mid-October.

Victory

(Minn. No. 396)

The New "Minnesota McIntosh"

Victory not only possesses the famed aromatic flavor of the McIntosh, but surpasses it in these respects—Better Color, Firmer Flesh, Higher Quality, Superior Cooker, a Week Later, Keeps Month Longer, Sticks to Tree, Handles Better.

Truly Victory is one of Minnesota's finest apples.

"EXTRA LARGE" WHAT IT MEANS

Our "Extra Large" size apples listed above are a larger, better balanced, especially selected grade of trees. They are the "cream of the crop"—easily worth the slight cost over the "Large Size."

Sensational New Varieties

THE EIGHT BEST "OLD FAITHFULS"

Beacon

(Minn. No. 423)

An Early All-Red Eating Apple That Tops the Early Fall Market

The leader among all early fall varieties for the middle west.

Trees—Vigorous, productive, hardy.

Season—Late Duchess. Keeps 1 month after picking, without cold storage.

Fruit—Highly colored, all red. Better eating quality than Duchess and an excellent cooking apple.

We are completely "sold" on them and are planting heavily. They are dependable bearers—one can take plenty of time in marketing, as they keep well, and they top the market.

Daniels Red Duchess

Still the Best Early Apple

A remarkable early red apple. An improved "bud sport" of the Duchess of Oldenburg.

It possesses all of the good qualities of the older variety and in addition that all important, price commanding quality of high red color. It comes when red apples are scarce—and always sells at top market prices.

We know of no better real early "summer" apple for general commercial or home growing in this section of the country.

DANIELS RED DUCHESS
BEARING IN NURSERY ROW

One of the many valuable characteristics of this splendid "Improved Duchess" is its early bearing habit. Frequently, as shown in the picture above, it bears even in the nursery row.

Erickson

The Biggest Red Apple

The largest early red apple, and possibly the largest red apple now highly recommended for planting. Bears at a very early age. Because of its extra large size it is always in strong demand on the early market. Extremely hardy, and a regular producer. Good quality. If you're looking for size—you'll find it in Erickson—and you'll find early market high profits, too!

Haralson

(Minn. No. 90)

The Most Widely Planted Hardy, Red, Winter Apple

Haralson has really "arrived." Because it was one of the earlier Minnesota introductions, and because it has proven itself so valuable it is now one of our most extensively planted varieties.

Here are some of Haralson's outstanding good points: Very hardy... extremely productive... bears, and heavily, at a very young age... red... good size... sticks to the tree until picked... good in quality for dessert purposes, and an excellent cooker.

McIntosh

Quality Supreme

One of the finest apples grown. Because of its brilliant deep red color, delicate flavor, crisp snow-white flesh, and distinctly pleasant aroma, it is considered by many to be the finest dessert apple of its season. McIntosh has proven eminently successful throughout the Southern part of the state and is at present one of the Northwest's most popular varieties. Season October to January.

Northwest Greening

The One Best Winter Greening

The best and longest keeping of the greenings. A splendidly formed, bright green fruit. Should be in every orchard for, even in ordinary storage, they keep well all winter and in a good vegetable cellar sometimes on into the summer. Unexcelled for pies and baking.

Prairie Spy

(Minn. No. 1007)

Hardy, Red, High Quality Winter Apple

Another outstanding origination of the Minnesota State Fruit Breeding Farm. Prairie Spy has many of the fine characteristics of that famous old apple of the East, The Northern Spy. Large red apple with quality equal to any late winter variety regardless of where grown.

The fruit is large, attractive red, exceptionally high quality, long keeper, clings to the tree until picked. A true winter apple.

The tree is vigorous, productive and hardy, except in highly unfavorable locations.

Wealthy

Minnesota's Most Famous Apple

The old favorite fall apple of corn and pumpkin time! Probably no eating apple is more popular and more

loved than Wealthy. Wealthy's appetizing red appearance, its crisp, white, juicy flesh and sprightly flavor have endeared it to many.

In spite of all the fine new varieties—Wealthy retains its popularity and will be largely planted for years to come!

DANNY SAYS:

"Gone With the Wind?" Not so for Fireside, Haralson, Northwest Greening, Victory and Prairie Spy, for they won't blow off the tree at picking time.

THE CRAB APPLES

We offer what we consider the four finest crabs for eating, jelly, pickling, and as hardy top-working stocks. The new Chestnut has been aptly called the "Super" Crab.

Chestnut

(Minn. No. 240)

A New "Super Crab"

(See description on Page 18)

Dolgo Crab

Dolgo is generally conceded to be the most beautiful of all apple trees. It is heavily laden with large white flowers at blossom time, and later the brilliant red fruit is borne freely in beautiful rope-like clusters, among dense foliage of vivid, dark green.

The fruit is oblong in shape, of rare beauty and has a very unusual lemon-like flavor. Far superior to other crabs for jellies, producing a transparent bright red jelly of high quality. Will jell even when dead ripe.

Virginia Crab

One of the oldest and most dependable crabs. Tree large, vigorous and heavy bearer. Very hardy. Unsurpassed as a stock for top-working to less hardy varieties.

Whitney Crab

A large crab, generally considered the nicest eating of all crabs—and by many the best eating apple of its season—early fall. Large in size for a crab, well colored, with crisp flesh and a delightful flavor. A hardy, strong, very upright grower.

DANIELS

"VEST POCKET ORCHARD" APPLE TREES

SUPER HARDY—NORTHERN GROWN—EARLY BEARING

Four to Nine Varieties on One Tree

How often has the city home owner sighed for three or more varieties of apples when there was room for only one tree in his yard! To meet their needs we have developed Daniels Vest Pocket Orchard apple trees. By means of a painstaking process of grafting, we have developed trees which will bear 4, 5 and even up to nine different varieties on the one tree. Each variety is as perfect as if it had grown on a normal tree. We have used only the best varieties as Fireside, Minjon, Wealthy, Haralson, Dolgo, Daniels Red Duchess, McIntosh and Erickson. Aside from its utilitarian value, you will get more "bang" out of one of these trees, bearing several varieties of fruit at once, than out of any other plant on your grounds. **Order Early! 4 varieties \$4.00; 5 varieties \$5.00; 6 varieties \$6.00; 7 varieties \$7.00; 8 varieties or more \$7.50. Not available.**

Daniels "Can't Waiters"

FRUITS FOR THE MAN WHO CAN'T WAIT!

So, so often people ask us for trees that will bear right away. "I must have something that will fruit right away—I'm getting old and can't wait forever," is what they say. SO, we're growing for the "can't waiter" an extra large, fine transplanted tree all ready to go to work for you—and for a lack of a more "pat" title we call them our "CAN'T WAITERS."

This year, for the first time, we have at last caught up in our production of these "CAN'T WAITERS" and offer over 2000 of these this spring. These have been grown by transplanting the regular planting size into a new field and then growing them on for two, three or four years more.

During this time they have gained greatly in maturity—in caliper, in height, in branching and in root development. Many of them have already borne some fruit right in the nursery rows. But, because of the extra transplanting and care we have given them, they move as successfully and as safely as a younger tree.

We have "CAN'T WAITERS" in practically all of our apple and pear varieties and in most of our cherries and plums.

They are pretty large for shipping so we suggest pick-up or delivery service. They are too large and bulky for putting in our storage cellar so are dug just as they are wanted—and **must go out** before the leaves start to grow.

We have them in \$3.00, \$4.00 and \$5.00 sizes—and a few in larger sizes. The \$4.00 size comprises our largest assortment. As fast as we receive your order we

go out and actually tag, with your name, the best trees of the size and kind ordered. They are then dug for you as soon as digging starts.

So we suggest ordering early, for then we have the largest and best assortment.

If you are a "CAN'T WAITER" and "can't wait" for fruit crops, why not send in your order NOW?

Buy early—but buy the best—Buy Daniels Hardy northern grown plants of the best varieties for the North.

DANNY SAYS:
Crazy? . . . No, just PLUM crazy—and any one who grows these luscious big Minnesota plums is crazy about plums, too.

PLUMS

ELLIOT—Late. A large, attractive, red plum of good quality. We have a large block of Elliot in our orchards that have been fruiting over 20 years. It has been one of our most regular, dependable and profitable varieties.

EMBER—Mid-season, to late. The longest keeper of them all. Skin yellowish with attractive red blush, high quality and heavy bearer. One of the best.

PIPESTONE—One of the most recent introductions of the State Fruit Breeding Farm—it is rated by experts as one of the best of them all. Of good, red color it is one of the largest plums, early in season, high in quality, and a very heavy producer. An excellent canner.

REDCOAT—Early. Another of the most recent University introductions. Tree is vigorous and highly productive. Fruit is medium sized, prune shaped, fully covered — a rich red, and **entirely freestone**. One of the most popular early varieties.

SUPERIOR—Mid-season. Largest of the Minnesota varieties. In flavor, good red color, texture, size and productivity it has proven itself worthy of its name—**Superior**. One of the finest of all the plums.

UNDERWOOD — The earliest and one of the best of them all. Large, rich red skin and firm juicy golden flesh. Excellent quality. Available only in "Large" size.

THE POLLINIZER PLUMS

POLLINIZERS (An Orchard Necessity)—Certain varieties have proven themselves excellent Pollinizers for the big Minnesota plums. Some pollinizers work better on certain varieties than others, so we suggest that the selection of a pollinizer variety be left to us. But don't forget that proper pollinizers are essential to heaviest fruiting of the other plums.

SURPRISE—One of the best of the old "Americana" types. High quality fruit. Sometimes a light yielder, but always an excellent pollinizer.

TOKA—One of the most popular of the South Dakota introductions. A hardy, prolific and vigorous grower. Fruit of large size and splendid quality. Good cooking and canning plum. A regular, heavy fruiter.

PLUM PRICES

	1	5	10
Standard	\$1.25	\$5.75	\$10.00
Large	1.50	7.00	12.00
Extra large, bearing, age.....	1.75	8.00	14.00

● Only the standard size Plums are mailable. Add 10% for postage.

Daniels Quality Plums

A few years ago—yes, very few—no one dreamed that fruits like these could be grown except on the Pacific coast. But now, thanks to clever plant wizards of our State Fruit Breeding Farm, these tested and proven plums are being grown successfully throughout the entire middle west, and any of us can enjoy the pleasure of stepping into our own yard or orchard to pick our fill of these luscious plums of such intriguing flavor—right off the tree—bursting full of juice, vitamins, and pep.

Through the use of a proper assortment of varieties, such as we list, it is possible to have six, seven, yes even eight weeks of fresh plums from your own orchard—plums of such large size and tantalizing quality that no one can afford not to have them in their own orchards.

Good stock is the foundation of success in growing these plums, whether in a small home planting or a large commercial orchard. Daniels trees are good trees and everything that the word implies—true to name . . . well grown . . . large tops and roots . . . carefully handled and packed . . . guaranteed to bring you satisfaction.

Plums need to be pollinated with pollen from some other plum variety if they are to produce satisfactory crops. Whenever new plum trees are set out or established trees are not fruiting satisfactorily, be sure to plant a pollinizer plum near them.

VISIT DANIELS ONE STOP GARDEN SHOP

Our new garden shop now makes it possible to get at Daniels Nursery not only the best in nursery stock in the usual grades, but also many potted specials in perennials, annuals and other plants, as well as a large assortment of the best in gardening supplies, equipment and accessories.

PEARS

Best Commercial and Home Orchard Kinds

DANIELS HARDY PEARS

HOME GROWN—TREE RIPENED PEARS

(In your own yard)

ARE YOURS FOR THE PLANTING

AS SURE AND AS EASY AS APPLES

May sound too good to be true, but it's a fact that we can now grow pears here in the North—good eating and good canning, too. We're doing it now, many, many others are and you can, too.

Pears are no longer an experiment in Minnesota and adjacent territory. The varieties we list have proven their suitability to this climate with many years of successful production. The new Bantam (Minn. No. 3) is the finest small pear yet developed for the North. You can now grow in your own home orchard good quality pears in sufficient quantities for any family's eating and canning needs. If you are not growing them you are missing something worth while!

Parker Pear

(Minn. No. 1)

Wonderful Pear Creation from the
State Fruit Breeding Farm

This, Minnesota's largest named pear originated at the State Fruit Breeding Farm, has proven of real value in Minnesota.

The fruit is large. The flesh tender and juicy, and the quality very good. In color it is yellow overlaid with a distinct blush. It is especially recommended for general planting in southern Minnesota and in favorable locations in the north. Season, early September.

BANTAM

Pears are as easy to grow as apples—just as safe in adapted sections, and just as sure croppers. They are equally suited to lawn or orchard growing. As they make a somewhat narrow tree they may be planted closer together, usually 20x25 feet apart, so are even better adapted to backyard culture. It is safest to plant two varieties for best pollination—although these pears are fairly self fertile.

DANNY SAYS:
Don't be blindfolded to the Horticultural "Facts of Life." If you know all about the bees and the flowers and the fruit, Why don't you raise your own, HONEY?
SEE DANIELS
ONE STOP GARDEN SHOP

BEEES BOOST FRUIT PRODUCTION

The Great New Pear Bantam

(Minn. No. 3)

The Earliest, Sweetest, Hardest, and Quickest Fruiter of the Pears

Bantam is the new name just given to the Minnesota No. 3 Pear by its originators, the University of Minnesota.

Considered the hardest of the pears, Bantam has withstood even our northern Minnesota climate. It bears young and yields heavily. The fruit is excellent for eating and splendid for cooking and pickling. The tree is vigorous and entirely blight resistant.

In size, as its name indicates, the fruit is similar to the famous Seckel Pear, but heavy production makes it "bushel up" as well as most larger fruiting pears. The quality is excellent as a dessert fruit—splendid for cooking and unsurpassed as a pickling pear. In color it is a yellowish-russet, sometimes with a light blush of pink. Season September 1st to 15th. Don't fail to plant this splendid new pear this year—but order early as supplies are limited.

Daniels Pear Prices

	1	5
2 year—large size.....	\$1.60	\$7.50
2 year—extra large.....	1.85	8.75

We have some fine "Can't Waiters" in Pears. See page 20.

Mendel Pear

40 Years Old and Still One of the Best

Another of the best hardy pears. The tree is a vigorous grower and blight resistant. Fruit is of medium size and of fine quality, sweet and juicy and clings well to the tree. Keeps well into November.

Trees of Mendel Pears are bearing well throughout the southern part of Minnesota and are recommended by the University for planting as far north in Minnesota as Cass county. Plant Mendel now and enjoy your share of this, the finest of fruits for the North! We have fruited it since 1925—for 25 years.

DANNY SAYS:

Good things come in PEARS . . . and good PEARS come in threes as well as in PAIRS! If you could have seen and tasted the delicious pears the boss raised in our orchards last fall you wouldn't let another spring go by without planting several yourself. Honestly—they are just as easy to grow as apples!

OKA

DANIELS HARDY CHERRIES

You don't need an orchard to grow cherries, for the small size, attractive form, foliage and color of these trees make them valuable assets to any ornamental border.

The splendid cherries we list on this page have adequately proven their desirability both from the home garden or market point of view. With an assortment of these one can have the finest of cherries for eating and for canning.

Daniels Cherry Trees—propagated by the methods we use—have proven hardy throughout the Northwest and well on up into Canada.

Compass is the best pollinizer for the other cherries and should always be planted with them. Should you have an existing planting of cherries that is not fruiting well, plant some Compass along with them and you will be surprised with the way this correct pollinization will increase your yield.

Bearing age trees generally blossom the year planted and should fruit the year following without fail.

OKA—A tremendous yielder of large round cherries fully one inch in diameter. Dark red outside with a juicy, purple meat inside. Wonderfully sweet. The best of all the purple fleshed cherries.

SAPA—Another excellent Cherry-plum hybrid with purple flesh and juice. Sapa is somewhat larger than Oka and has more of its plum parent characteristics. Bears at a very early age and is usually an annual bearer.

COMPASS—While this fine old variety is not the equal of the other cherries in quality it is a most acceptable and popular fruit for canning. It is one of the best pollinizers known for the other cherries and should be included in all plantings.

Prices on the Above Cherries

	1	5	10
Second Size (3-4 ft.).....	\$1.25	\$5.75	\$10.00
First Size (4-5 ft.).....	1.50	6.75	12.00
Bearing Size (5-6 ft.).....	1.75	8.00	14.00

FRUIT PLANTS AS ORNAMENTALS

Fruit plants often work well into the ornamental planting. Gooseberries and currants may be used either in the informal border or for low, compact hedges. Red Raspberries make a most attractive, taller hedge. Strawberries may be used as a low edging for the border or flanking a path.

The cherries suitable to our Northwest

climate may be used in place of a large shrub or small tree in the informal border. Plums may be used in the same way, allowing them more room, or used as small trees in the lawn—preferably to the side or rear. Apples, if allowed sufficient room, also may be used in the border but properly should be in the more open or lawn area because of their large ultimate size.

DANNY SAYS:

Since my first Birthday (22 years ago) I have been the Boss' constant companion in "getting out" the catalogs and other publications. Three years ago I "took the bull by the horns" and wrote (perhaps with a little help from the boss) a little garden guide entitled "Danny's Pewee Primer of Horticulture."

I have recently revised and enlarged it, bringing it up to date. I want you to have one (free of course), for I'm sure you will find it truly helpful. It's a little 32 page booklet—but "Zowie!" how much helpful information it contains! I think you'll enjoy and profit by reading it, and will use it for later reference.

Why not send a postal for a free copy to-day?

Or phone us at Long Lake 174

Compliments of
THE DANIELS NURSERY

LATHAM

The Country's Greatest Raspberry

In 1909 (41 years ago) I grew my first raspberry. In 1914 I was growing a considerable acreage of them—Cuthbert, Minnetonka Iron-Clads and others that have, for the northwest at least, gone the way of the one-horse shay. Shortly afterwards the University of Minnesota introduced the **Minnesota No. 4**. We were one of the first to plant it and have been growing it in large quantities ever since. Long ago it was named **Latham**—and **Latham**, to our way of thinking, is still the finest raspberry known. Not only in Minnesota, but in the entire fruit growing sections east of the Rockies, more Lathams are grown than all other varieties of red raspberries put together.

Latham is "tops" for the home garden or for the commercial grower. It is of high quality, large, productive, and hardy. Berries frequently measure an inch across. Yields of 200 to 400 crates per acre are not uncommon, and higher yields have been reported. It is a good shipper, it is a good canner, and it always brings top market price.

For the one best raspberry we say plant **LATHAM**.

DANIELS LATHAM PRICES

LATHAM

INDIAN SUMMER

BEST EVERBEARING RED RASPBERRY

This new two-crop or everbearing Red Raspberry was introduced by the New York Experiment Station several years ago, and has been well tried out, and proven a success, both as a one-crop bearer, and also as an everbearer. The fall crop is borne on the new growth. The fall crop will start in September and continue till frost late in the fall. Berries are large, conical shape, firm, few seeds, and sweet. Fine shipping quality. The plant is a husky grower, hardy, and resistant to common diseases. Bears mid-season to late fall. Extra select plants; 12 for \$2.45; 25 for \$4.15; 50 for \$7.50; 100 for \$13.00.

If Raspberries or Blackberries are to go by mail, add 10c per 25 (or less).

SNYDER

Alfred Blackberries

The extreme popularity of this splendid blackberry is well deserved for it is not only the hardiest of the better blackberries but it is the best in quality. Plants are vigorous and very productive. Probably the best for home and commercial plantings in the North. 12 for \$1.75; 25 for \$3.15; 50 for \$5.40; 100 for \$9.50.

Cumberland Black Raspberries

Generally conceded to be the best of the "Black Caps." A vigorous grower and heavy yielder of large, juicy berries of the highest quality. Has stood the test of time. Most widely planted of all black raspberries. We offer strong two-year transplants at 12 for \$2.35; 25 for \$4.40; 50 for \$8.15; 100 for \$14.65.

HOW TO GROW RASPBERRIES AND BLACKBERRIES

The canes of these brambles live only two years. Each year new canes grow up from the ground, produce their crop of fruit in the second year of their life and then die; later crops are produced from the subsequent, annually produced new canes.

Planting—The brambles may be planted in either spring or fall. They should be set 1 to 2 inches deeper than they originally grew and after planting the canes should be cut to a stump of from 2 to 4 inches in height. Fall-set plants should be mounded up with dirt, and each mound lightly mulched with manure or other material.

Planting Distances—	
Red Raspberries, Hill	4 by 6 or 5 by 5 ft.
Hedge	1½ to 3 by 6 to 7 ft.
Black Raspberries	3 to 4 by 6 to 7 ft.
Blackberries	1½ to 3 by 7 ft.

Culture — Clean, thorough cultivation should start early in the spring and continue until the latter part of August. Later cultivation may induce later growth and resulting immaturity. Red raspberries should be restricted to 6 to 10 canes to the hill, or in the hedge row system to a spacing of 6 to 8 inches apart in rows not over 10 inches wide. After each fruiting season the old canes (those which have borne) should be removed at the ground line. Before growth starts in the spring all weak and surplus canes should be removed at the ground and those remaining headed back somewhat—the amount depending upon the training and support system.

DANNY SAYS:

"The one best cellar"—That's our modern, refrigerated storage cellar that keeps stock "in the pink" at all times—dormant, full of pep and ready to grow even long after the normal planting season. It has the most modern and scientific temperature controls. Expensive? Yes—but it's worth it to be able to deliver the best stock in the Northwest.

Daniels Certified Strawberries

Sure to Grow—Sure to Bear

Daniels hardy, northern grown strawberry plants have been produced on specially selected and prepared soils to meet the needs of planters here in the Northwest.

Strawberry plants are the most perishable of all fruit plants. Long shipments from distant points, with all too frequent delays, usually mean decreased vitality.

PLAY SAFE! Use Daniels fresh dug, carefully packed plants. THEY GIVE GROWING SATISFACTION.

Everbearing Varieties

These varieties bear two crops a year. Plant this spring—pick this summer and fall until hard freezes kill all blossoms.

You'll get back the price paid for plants, and most important, a big profit in the first year besides. You'll harvest another fine crop the following June and fall—two crops in one year.

GEM—Probably the most widely used and most generally planted of the older everbearers. Highly productive—a good plant maker, hardy, with large, bright red fruits slightly tart and of excellent quality. An ideal all-round berry for the Home Garden or the commercial grower.

EVERMORE (Minn. No. 1166)—The first everbearer to be introduced and named by the Minnesota Fruit Breeding Farm in over 20 years. It must be, and is, good. Named just last winter. An excellent plant maker for an everbearer, and usually very productive. The quality is very good and slightly acid. Has shown extreme hardiness and high ability to resist drouth. Supply very limited. Order early.

MARVEL (Brunes)—An everbearing variety of outstanding merit. The plants are vigorous, productive, and withstand drouth exceptionally well. The berries are large and very sweet—in our opinion the sweetest of all the everbearing.

SUPERFECTION—One of the newest and best Everbearers. Those who have tested **Superfection** thoroughly since its recent introduction, believe that it will prove to be one of the very best, if not the best, of our everbearers. Berries are large, roundish, a deep red in color and deliciously sweet in flavor. The fruits are very firm, making it a good

handling and shipping berry. It's worth trying!

Junebearing Varieties

Junebearers produce one crop each year—in June. Plants set out this spring will produce their first crop next year.

ARROWHEAD (Minn. No. 1118)—A most promising University of Minnesota origination that has just been named. Its points of superiority are: hardy, vigorous, good plant maker. **FRUIT**—large, good color, excellent flavor, firm for shipping, splendid for dessert, freezing and jam purposes. This looks like a real "comer" in the Junebearing field.

DUNLAP—The "old faithful" of the Junebearing varieties. For many years this has been the best known and most widely grown strawberry variety.

PREMIER—Aptly described as the one strawberry without a fault. Although nearly a week earlier than the old Dunlap and other Midseason varieties, it maintains a heavy production over a long period. The firm, bright red berries maintain their large size well throughout the season. An excellent canner. The most popular early and mid-season berry.

Red Lake

The Country's Finest Red Currant

This splendid currant is another triumph for the great Minnesota State Fruit Breeding Farm. University authorities and growers throughout the country agree that this is the finest red currant yet introduced. Wherever it has been tried it has met with instant favor—rapidly superseding older varieties in both home and commercial plantings.

Ripens early, mid-season and holds on the bush for a long time without "shelling" or shriveling so it can be marketed when prices are highest. Always brings top prices. We consider it the most profitable, not only of all currants, but of all small fruits as well. Established plantings were producing from \$500 to \$1,000 per acre even at pre-Pearl Harbor prices, and the demand has been greater than the supply.

Cascade

(Minn. No. 70)

Another splendid Currant created by our Minnesota Fruit Breeding Farm. Just as hardy and productive as the Red Lake but larger in size and about a week earlier.

A more upright grower than Red Lake, but the bunches and the stem are both slightly shorter.

Those who crave the "ultra" in size and quality in a currant will want to plant Cascade.

Our stocks are very limited, so please order early.

RED LAKE PRICES

	1	5	10	25
1 year.....	\$0.40	\$1.60	\$2.85	\$5.75
2 year.....	.60	2.50	4.50	9.00
3 year.....	.70	3.00	5.50	11.00

2 year plants	75c each; 5 for \$3.25

THE NORTHWEST'S FINEST GOOSEBERRY

PIXWELL (It Picks Well)

We consider this the best of all gooseberries now available for general planting. It is an extremely easy variety to pick as the thorns are rather soft and not troublesome, and the berries hang on slender stems almost 2 inches below the twigs. Hardy, a vigorous grower, and one of the heaviest yielding gooseberries we have ever seen.

The berries are large, light green, ripening to a pinkish color. The fall foliage is an attractive

bronze, making it an excellent plant in shrub borders or for use as a hedge.

This interesting North Dakota production has taken the "stick and prick" out of gooseberry picking. The berries may be picked rapidly and with no discomfort—truly an innovation in gooseberry growing.

Strong 2 year plants 90c ea.; 5 for \$4.00; 10 for \$7.00

CANADA RED

RHUBARB

For Pie, Sauce, and "What Have You?"

The New Chipman's Canada Red Rhubarb

A new introduction from Canada, this variety is unquestionably the most beautifully colored, all red stem of any rhubarbs now grown. Stems are dark red way to the center and carry the color up into the leaf veins. Makes a beautiful, deep red sauce of sweet, mild flavor. Stocks very limited.

Strong divisions 90c each;

2 for \$1.75; 5 for \$4.00

Add 10% if items on this page are to go by mail.

Two Other "Super" Rhubarbs

MacDONALD — The finest of the large stalked, high quality rhubarbs. The planter who wants a rhubarb of high quality — good red color and heavy yield of large stalks, will find nothing better than MacDonald.

RUBY — A heavy producer with much higher coloring and better quality than MacDonald. It excels all older Rhubarbs (Strawberry included) for culinary uses because of its mildness and strong color. Stalks are somewhat smaller than those of MacDonald.

Prices on Ruby and McDonald

Strong Divisions	\$0.60	\$2.75	\$4.50
Medium Divisions....	.50	2.25	4.00

DANIELS QUALITY GRAPES

Grapes are one of the easiest fruits to grow and definitely one of the "easiest to eat." We are growing two of the older varieties and three of the new Minnesota Fruit Breeding Farm creations. These new Minnesota varieties are tops in the hardy grapes, excellent quality, good producers and are hardy without winter production.

BETA—About half way between the Concord and the wild grape in both size and quality and is a very heavy producer. A great favorite for jellies and wines.

CONCORD—The most popular and most widely grown of the older dessert varieties. Because it is not hardy enough without winter protection for most of Minnesota, it is being rapidly replaced by the new varieties described below.

BLUE JAY (Minn. No. 69)—Probably the best of the blue, hardy grapes introduced by the Minnesota State Fruit Breeding Farm. A vigorous grower and heavy producer of large, high quality grapes. The bunches are compact and of medium size. Recommended for all parts of Minnesota. Plant with other varieties for pollination.

MOONBEAM (Minn. No. 66)—Another splendid Minnesota Station creation. A hardy, high quality "white" grape of great value. A vigorous grower. Fruit is large, skin tender, and flavor sweet, mild and pleasant. Ripens just after Beta. The vine is very vigorous and the foliage resistant to mildew. Truly one of our finest desert grapes. Recommended for all of Minnesota.

RED AMBER (Minn. No. 45)—A very high quality amber-red grape that has really "gone across." The vines are vigorous and productive. The fruit is large and borne in well formed clusters. The finest flavor of these new Minnesota varieties. Good for both cooking and dessert uses.

GRAPE PRICES

	1	5	10

RED AMBER.....	.95	4.50	8.00

ASPARAGUS

Easy to Grow—and So Good for You
ONE PLANTING LASTS MANY YEARS

MARY WASHINGTON

This Giant Asparagus, the result of years and years of plant breeding work done by the United States Department of Agriculture, is everywhere admitted to be the finest asparagus grown. Mary Washington seems to be the ideal asparagus as it is rust-resistant and surpasses all other varieties in yield and quality. Its enormous tender shoots of vivid dark green retain their tenderness and do not branch until well above cutting height.

Plant **ASPARAGUS** and **RHUBARB**
and enjoy early spring garden health
and joys for years and years to come.

AN AMAZING NEW TRAP

CATCHES ALL KINDS OF ANIMALS

Can't Harm Children, Pets, Birds or Poultry

UNEXCELLED FOR RABBITS

We've used it for years and consider it the best of all traps.

Open at both ends. Animal walks in unsuspectingly

Both ends shut. The animal is caught unhurt

The amazing all metal galvanized "Havahart" traps beat snap traps all hollow.

This trap works like the old box trap except it opens at both ends so the animals can see all the way through and get a feeling of confidence.

There is no more safe or efficient animal trap.

Prices on Havahart Animal Traps

No. 1— 5x 5x18—Weasels, Rats, Chipmunks.....\$3.50

No. 2— 7x 7x28—Muskrats, Mink, Squirrels,

Rabbits 4.50

No. 3—11x11x36—Woodchuck, Raccoon, Cats.....10.50

Be weatherwise! Use this scientific instrument that accurately measures up to 6" of rainfall. Designed by a meteorologist. Not a toy but a real rain measuring device. Simple, easy to read. Rustproof and unbreakable. Instructions and 11 year record book included. Satisfaction guaranteed.

ONLY \$2.25 EACH

If to be mailed, add 10c.

We are Members of
The American Association of Nurserymen, Minnesota State Nurserymen Association, Twin City Nurserymen Association.

Plant America!

WHEN TO ORDER—As early as possible. "First come, first served," is the rule. Early ordering is a big help to us, and frequently late orders cannot be filled in full. Why not send your order in now? It will be carefully booked and shipped to you at the time you want it.

PRICES—Prices in this catalog are guaranteed only for orders in the spring of 1950 and annul and supercede all prices quoted previously. **All prices are F.O.B. Long Lake, Minnesota,** unless otherwise specified. (See "Method of Shipping.")

TERMS—Our business and moderate price schedule have been built on a cash with order policy, and we prefer to have your orders accompanied by cash in full. This plan enables us to keep down costs and to maintain low prices. If C.O.D. shipments are preferred, 25 percent must accompany the order, balance C.O.D. On out of town checks please add 5c for bank "float" charge.

IN LANDSCAPE PLANTINGS payment is expected immediately upon completion of the work. However, if desired, we are always glad to establish book accounts for clients of established credit. All accounts are due not later than the 10th of the month following date of purchase.

METHOD OF SHIPPING—Express is safest and generally the best way to ship plants. Many small orders may be shipped satisfactorily by parcel post. We send postal charges C.O.D. unless proper amount is added to your remittance. Delivery facilities are available in the Twin Cities, their suburbs, and the Minnetonka area. In our landscape plantings, stock is delivered at the time we do the planting.

We invite those who wish to have their stock planted to avail themselves of the services of our skilled horticulturists. We can furnish these expert workmen in the Twin City area at the following rates: Evergreens at 40 percent of the cost of the stock, and other stock at 60 percent of the cost of the stock, except hedges which will be planted at 35 cents per foot. For the clients' protection our workmen are fully covered by Workmen's Compensation Insurance.

We are careful to keep our varieties true to name and will replace any items of stock that may prove otherwise or refund the price paid for such portions. It is agreed that the original price shall be the maximum damages the purchaser is entitled to. Plants (except strawberries or specially priced items) failing to grow the first season after planting will be resupplied once at one-half the original cost of the stock provided that such failure to grow is not due to neglect or improper handling on the part of the purchaser and provided that replacement claim reaches us prior to October 1st of the fall following planting. This order is subject to the condition that The Daniels Nursery shall not be liable for any delay or non-performance due to strikes, fires, acts of nature, government regulations or limitations or any other cause beyond our control.

DANNY SAYS:

Search the libraries—but you'll find no other book so filled with helpful information for the northern planter who wants to do his own landscaping as this new book "YOU CAN LANDSCAPE YOUR OWN HOME." It is written in a simple, clear manner, freely illustrated so that even the novice can understand it and practice its teachings. Why not have your own designs for better living out of doors.

A Complete Short Course
in Landscape Gardening.

AT LAST

"YOU CAN LANDSCAPE YOUR OWN HOME"

A Practical Hand Book of Landscaping for the Home-Owner

Here is the book that the small home-owner has wanted and couldn't find . . . until now! Between its covers are the answers to the oft asked question, "How can I landscape my home and get it right?"

YOU CAN OBTAIN THIS BOOK FREE!

See our generous free offer below.

You Can Landscape Your Own Home

- *Prepared for busy people with a house on an average size lot that they want to landscape and, perhaps, without the time and the money to go to great lengths immediately.
- *It is not a complete course in Landscaping. We think that its brevity and conciseness gives it a big advantage over a complete course. And who has the time and money to spend on a course?
- *Nor is it a thick, heavy tome to confuse the amateur landscaper but a workbook as well as a guide book. And it has been prepared with the idea in mind that you might want room for your own sketches and clippings.

- *Prepared by professional landscapers and nurserymen. Step by step it takes you through the 'dos' and 'don'ts' of Modern Landscaping. Over 100 easy to understand illustrations.
- *Completely illustrated and keyed to help you make your own plan. It discusses not only how to Landscape your home but gives lists of recommended plant materials for your section of the country. It will help you avoid costly mistakes.
- *Avoid costly mistakes by sending for your copy today.
- *Mortgage the house to buy the book? It won't be necessary for the price is only \$1.00 postpaid.

When you have problems in your planning and planting, drive out to see us. Ask for the book and let us explain its use and give you any other help you need . . . all without obligation. Why? We won't be coy about it . . . we want you to get acquainted with us. We think that you will like our way of doing business. We think that you will appreciate our friendly, helpful attitude. We think you will enjoy the absence of "high pressure salesmen." And we know that you will find there is no better nursery stock for you than that grown in your territory for your territory.

FREE BOOK OFFER

(Please Note Expiration Date)

We want you to have one of these new Landscape Handbooks described above FREE.

You may secure one of these Handbooks free in either of the following ways:

1. Send in an order for \$10.00 or more for nursery stock (accompanied by payment in full) to reach us before March 15, 1950 and one of the books will, if requested, be sent to you FREE by return mail.
2. Send in \$1.00 for the book (before March 15, 1950) and with the book we will mail you a "credit memorandum" good for \$1.00 to be applied on any order for nursery stock for \$10.00 or more which reaches us before June 1, 1950.

DON'T MISS THIS OPPORTUNITY
(Remember this offer expires March 15, 1950)

DON'T TAKE OUR WORD FOR IT
READ WHAT THESE AUTHORITIES SAY!

Prof. Harry A. Graves, Sec. North Dakota State Horticultural Society: "It appears to me to be just what I had been hoping some one would write for a long time . . . It certainly is down to a level where we can all understand it, and the many illustrations make it just that more valuable."

Prof. W. H. Alderman, Chief of Horticultural Division, University of Minnesota: "It is interesting and stimulating . . . The discussion is almost unnecessary, for the illustrations tell the story by themselves. I believe this sort of publication will fill a long felt need."

Prof. Leonard A. Yager, Extension Horticultural, University of South Dakota: "I think it fills a real need for this area and congratulate you on your efforts in publishing this book."

E. C. Hilborn, Pres. Northwest Nursery, Valley City, North Dakota: "It is indeed a splendid landscape book. It is very practical and your sketches are certainly very well done."

Prof. J. D. Winter, Division of Horticulture, University of Minnesota: "In my opinion you have done an outstanding job

presenting the fundamentals of landscape design in an easy to understand manner. The many illustrations are especially valuable."

A. H. Flack, Men's Garden Club of Minneapolis: "It is the best I have seen because it can be applied to the majority of our home yards."

Harold C. Pederson, Hennepin County Agricultural Agent: "We think it is an exceptionally nice job and I am sure it will be used to good advantage."

E. M. Hunt, Sec. Minnesota State Horticultural Society: "It appears to us that this publication fills a very definite need for amateurs in presenting practical suggestions on planting problems."

O. A. Bandelin, Past Pres. Minnesota State Horticultural Society, Red Wing: "Any home owner who contemplates landscaping his grounds and those who plan revising their plantings will find valuable information in this book. It is well illustrated and edited and easy to understand."

DANNY SAYS:

What peeps through the ground first in the spring? Of course, its the fall planted bulbs like . . .

TULIPS, HYACINTHS, NARCISSUS, CROCUS, Etc.

Fall is the time to plant them.

But why not write now and ask us to mail you our fall bulb circular when it is printed next August?
